A la fin de cette activité, l'étudiant aura progressé dans sa capacité à: - Connaître et comprendre un socle fondamental des mathématiques. Il aura notamment développé sa capacité à: -- Reconnaître les concepts fondamentaux d'importantes théories mathématiques actuelles. -- Etablir les liens principaux entre ces théories. - Faire preuve d'abstraction, de raisonnement et d'esprit critique. Il aura notamment développé sa capacité à: -- Dégager les aspects unificateurs de situations et expériences différentes. -- Raisonner dans le cadre de la méthode axiomatique. -- Construire et rédiger une démonstration de façon autonome, claire et rigoureuse. Acquis d'apprentissage spécifiques au cours. A la fin de cette activité, l'étudiant sera capable de: - Construire des corps finis dont le nombre d'éléments est une puissance quelconque d'un nombre premier arbitraire, effectuer des opérations dans ces corps et en reconnaître la structure. - Analyser des structures d'incidence, en particulier des espaces projectifs finis, et mettre en relation ces structures avec les carrés latins. - Comprendre comment sont mises en oeuvre les structures découvertes dans le cadre d'une application d'ingénierie: les codes correcteurs d'erreurs. - Etre capable de raisonner sur un code correcteur linéaire pour déduire ses propriétés fondamentales: longueur, dimension, capacité correctrice. *La contribution de cette UE au développement et à la maîtrise des compétences et acquis du (des) programme(s) est accessible à la fin de cette fiche, dans la partie « Programmes/formations proposant cette unité d'enseignement (UE) ».*

Le cours vise à donner les bases conceptuelles et les méthodes permettant de construire et d'analyser les corps finis et diverses structures combinatoires associées, avec une attention particulière pour les corps correcteurs d'erreur. Les contenus suivants sont abordés dans le cadre du cours.
- Corps finis: construction, structure et propriétés des éléments (ordre multiplicatif, polynôme minimal).
- Enumération des polynômes irréductibles en une variable sur un corps fini.
- Carrés latins, plans projectifs et designs symétriques: construction et caractérisations par les matrices d'incidence.
- Codes correcteurs: codes linéaires, capacité correctrice, longueur, dimension, représentations matricielles, codes cycliques, codes de Reed-Solomon, codes convolutifs (selon temps et intérêt).
