Enseignants	Pensieroso Luca ;
Langue d'enseignement	Anglais
Lieu du cours	Louvain-la-Neuve
Thèmes abordés	It is supposed that graduate students have already had some general introduction to the history of economic theories. Therefore this course will rather deal with special topics to be studied in depth. Possible topics are: the evolution of the meaning of equilibrium in economic theory; evolving conceptions of rationality in economic theory; the history of macroeconomics; controversies over involuntary unemployment in economic theory., the history of welfare theory, etc.
Acquis d'apprentissage	<p>This course belongs to the group of critical courses aiming at complementing the technical education offered to our master students with a more philosophical, methodological and historical reflection. It should help students to get a broader per-spective in an age of specialization and emphasis on technical skills. Moreover, it should also alert them to the fact that pro-gress in economic theory, however elusive it may be, goes along with controversies and scientific revolutions.</p> <p>-----</p> <p><i>La contribution de cette UE au développement et à la maîtrise des compétences et acquis du (des) programme(s) est accessible à la fin de cette fiche, dans la partie « Programmes/formations proposant cette unité d'enseignement (UE) ».</i></p>
