

Au vu du contexte sanitaire lié à la propagation du coronavirus, les modalités d'organisation et d'évaluation des unités d'enseignement ont pu, dans différentes situations, être adaptées ; ces éventuelles nouvelles modalités ont été -ou seront- communiquées par les enseignant-es aux étudiant-es.

5 crédits	30.0 h	Q2
-----------	--------	----

Enseignants	Kolp Manuel ;Saerens Marco ;
Langue d'enseignement	Anglais
Lieu du cours	Louvain-la-Neuve
Préalables	<ul style="list-style-type: none"> <li>• A first course in programming</li> <li>• A first course in information systems analysis and design</li> <li>• A first course in multivariate calculus</li> <li>• A first course in linear algebra and matrix theory</li> <li>• A first course in probability and statistics (including maximum likelihood estimation)</li> <li>• A first course in multivariate statistical analysis</li> </ul>
Thèmes abordés	<p>Nowadays, data are everywhere. For most organizations, potentially every area of its business, as well as every relationship related to its business, can now be quantified and recorded. Such amount of data led to the emergence of powerful methods for storing, processing, querying, and extracting useful information/knowledge from these data. This course will be focused on methods for data understanding, design, management, preparation, modeling, querying, and visualization, as a global means for the organization of making better decisions. As a central element in data analytics, modeling and methodology will play an important role in this course, including, e.g., data design for business intelligence analytics, predictive modeling, or fitting statistical models to data.</p>
Acquis d'apprentissage	<p><b>Having regard to the LO of the programme, this activity contributes to the development and acquisition of the following LO :</b></p> <ul style="list-style-type: none"> <li>• Appliquer une démarche scientifique (3.1 à 3.5)</li> <li>• Gérer un projet (7.1 à 7.3)</li> </ul> <p>1 <b>At the end of this course, students should be able to :</b></p> <ul style="list-style-type: none"> <li>• Understand and evaluate the scope, the risks, and the opportunities of data analytics within a company;</li> <li>• Understand and apply the standard methods and methodologies, coming both from computer sciences and statistics, for managing, exploiting, and analyzing these data;</li> <li>• Extract useful information &amp; knowledge supporting decision-making from these data;</li> <li>• Analyze and interpret the obtained analytical results.</li> </ul> <p>-----</p> <p><i>La contribution de cette UE au développement et à la maîtrise des compétences et acquis du (des) programme(s) est accessible à la fin de cette fiche, dans la partie « Programmes/formations proposant cette unité d'enseignement (UE) ».</i></p>
Modes d'évaluation des acquis des étudiants	<p><b>En raison de la crise du COVID-19, les informations de cette rubrique sont particulièrement susceptibles d'être modifiées.</b></p> <p><b>Continuous evaluation</b></p> <ul style="list-style-type: none"> <li>• Date: Will be specified later</li> <li>• Type of evaluation: Project with rapport</li> <li>• Comments: 40% of the final result</li> </ul> <p><b>Evaluation week</b></p> <ul style="list-style-type: none"> <li>• Oral: No</li> <li>• Written: No</li> <li>• Unavailability or comments: No</li> </ul> <p><b>Examination session</b></p> <ul style="list-style-type: none"> <li>• Oral: No</li> <li>• Written: Yes</li> <li>• Unavailability or comments: 60% of the final result</li> </ul>

Méthodes d'enseignement	<p><b>En raison de la crise du COVID-19, les informations de cette rubrique sont particulièrement susceptibles d'être modifiées.</b>                  Classical courses and case studies</p>
Contenu	<p>The scope of the course is broad and the instructor will certainly not be able to cover all of the material concerning data analytics in business. Depending of his background, interests and experience, he will focus on some specific techniques or skim through a broad range of methods.</p> <p>Potential covered topics are (but not limited to): database design for data analytics, business intelligence techniques, dimensionality reduction for data visualization, extracting recurrent patterns from data, cluster analysis, predictive modeling (supervised classification and regression methods), modeling relationships by latent variable techniques, data analysis algorithms scaling to big data, etc. All these techniques must be illustrated through business applications.</p>
Bibliographie	<p><b>Potential sources:</b></p> <ul style="list-style-type: none"> <li>• Provost &amp; Fawcett (2013) 'Data science for business'. O'Reilly.</li> <li>• Sherman (2014) 'Business intelligence guidebook: from data integration to analytics'. Morgan Kaufmann.</li> <li>• Efraim, Sharda &amp; Delen (2010) 'Decision support and business intelligence Systems'. Pearson.</li> <li>• Leskovec, Rajaraman &amp; Ullman (2014) 'Mining of massive datasets, 2<sup>nd</sup> ed'.
