Langue d'enseignement	Anglais
Lieu du cours	Bruxelles Saint-Gilles
Acquis d'apprentissage	
Modes d'évaluation des acquis des étudiants	<p>At the end of this teaching unit, the student will be able to:</p> <ul style="list-style-type: none"> <li>* integrate into a design office to observe and understand the role of the actors involved in the act of building</li> <li>*develop a reflective spirit vis-à-vis both theoretical knowledge and professional practices to be actively involved in the work of an architectural firm and become aware of its responsibilities</li> <li>*present their experience in the field in a clear and precise manner, by means of a report presented according to the proposed framework.</li> </ul> <p>Contribution to the LO repository:</p> <ul style="list-style-type: none"> <li>*Mobilize other disciplines</li> <li>Go to meet other concepts and methods, exchange and feed the architectural reflection</li> <li>Strategically manipulate content from other disciplines to question the design and implementation of the architecture project</li> <li>*Realize a technical dimension</li> <li>Observe and evaluate the constructive principles that generate a formal, material and temporal dimension of architecture</li> <li>Adopt a professional attitude</li> <li>Organize, plan, develop and synthesize individual or collective work</li> <li>Observe the evolution of professional practice, adapt by getting involved independently in a logic of research and continuous development</li> <li>Make committed choices</li> <li>Demonstrate ethics and a capacity for resistance through one's architectural positions</li> <li>Be aware of the political significance of one's activity, and one's responsibility to society, in the public interest</li> </ul>
Méthodes d'enseignement	Internship in English
Contenu	<p>The internship offers students the opportunity to familiarize themselves with the activities and circuits related to the act of building. As well as with the practice of the profession. While being articulated with the teaching provided by the faculty, the internship unfolds over time at a very different pace from that of an organized teaching and thus allows the application of theoretical knowledge in a professional setting. The master's internship takes place in a design office, in a structure involved in the treatment of the built environment. It requires the presence of an architect or engineer-architect on site who will ensure the student's training. At the end of his/her internship, the latter draws up an activity report, accompanied by the various certificates required to ensure its validity.</p>
