Méthodes d'enseignement	Students have to attend the talks and discussions in class. They must also write a short paper (1500 words) on a philosophical question related to the topics discussed in class.
Contenu	<p><b>Climate justice : philosophical issues</b></p> <p>Climate change and climate policies raise tremendous issues of justice, unprecedented in scale and in nature. In particular, climate change confronts us with difficult questions of global, intergenerational and environmental justice such as "How should we balance the interests of future generations with those of the current poor, whose satisfaction relies on fossil fuels?", "Do rich countries have an ecological debt to pay to poor countries due to their earlier industrialization?" or "Do individuals bear a moral responsibility for their greenhouse gas emissions even if their impact seems insignificant?". In this seminar, we will draw on the climate justice literature to see how philosophical theories can inform climate policies. In doing so, we will pay particular attention to methodological issues such as the problem of isolationism (local justice) or the 'ought implies can' rule. Our special guest for the seminar will be Prof. Simon Caney (University of Warwick).</p> <p><i>PhD students and master students are welcome.</i></p>

Autres infos	Le séminaire requiert une compréhension passive de l'anglais à l'écrit (pour la lecture des textes) comme à l'oral (pour les discussions avec les intervenants invités). Toutefois, les enseignants pourront, si nécessaire, expliquer tel ou tel point en français ou traduire les questions des étudiants.
