Q1

Teacher(s)	Courtois Luc ;Warland Geneviève ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	<p>The first part of the course (Epistemology) aims at examining the value of the methods used by the historian to elaborate his knowledge. The methodology is based upon the experience of each participant, at the level of the making of the master thesis.</p> <p>Every step of the historical research initiates a debate about a number of theoretical questions concerning epistemology applied to history. Every participant will base the answers on his/her own practice as an historian. The answers will be written down in a document to defend during the exam.</p> <p>The second part of the course (Scientific communication) aims at deepening the competences of the students in terms of conceptualisation and use of semiotic data applied to the different types of historical stories.</p> <p>The course proposes a number of training modules including a theoretical part (concepts) and a practical part (works and exercises) approaching different communication supports in history : textual (written, oral speech, electronic publication) and mixed (partially using the relation between text and image as a vector of communication). Several dimensions of communication will be approached (narrative semiology, visual rhetoric,...).</p>
Aims	<p>This course proposes a deeper study of the development and the circulation of knowledge in history. It consists in proposing a common reflection about the models, the concepts, the methods and the scientific research and communication tools in history. The student will be stimulated to develop ways of epistemological reflection and scientific communication.</p> <p>After the course the student will: - master the fundamental concepts borrowed to the theories of language, as a linguistic code and representation mode, as well as a vector of communication that founds relationships between the talking subjects and the context of production and reception.</p> <p>1</p> <ul style="list-style-type: none"> - be able to reflect critically upon the semiotic stakes (modalities of representation) used in contemporary historian productions. - master the conventions and techniques that rule the elaboration of the historical discourse and within it the operational transfer of scientific contents between the different modes of story (texts, images, mixed messages) <p>-----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Evaluation methods	The evaluation is based on several little essays (review of a book, synthesis of scientific literature).
Teaching methods	/
Content	<p>For the part C (epistemology), the students will be introduced to important and useful concepts in history. An overview of contemporary historical trends shows how they integrate these concepts in their methodology.</p> <p>The part II (communication) recalls the main principles of writing a scientific text as well as editing it. It is followed by several exercises.</p>
