

Teacher(s)	Dupont Pierre ;
Language :	English
Place of the course	Louvain-la-Neuve
Main themes	<ul style="list-style-type: none"> • Learning as search, inductive bias • Combinations of decisions • Loss function minimization, gradient descent • Performance assessment • Instance-based learning • Probabilistic learning • Unsupervised classification
Aims	<p>Given the learning outcomes of the "Master in Computer Science and Engineering" program, this course contributes to the development, acquisition and evaluation of the following learning outcomes:</p> <ul style="list-style-type: none"> • INFO1.1-3 • INFO2.3-4 • INFO5.3-5 • INFO6.1, INFO6.4 <p>Given the learning outcomes of the "Master [120] in Computer Science" program, this course contributes to the development, acquisition and evaluation of the following learning outcomes:</p> <ul style="list-style-type: none"> • SIN1.M4 • SIN2.3-4 • SIN5.3-5 • SIN6.1, SIN6.4 <p>1</p> <p>Students completing successfully this course will be able to:</p> <ul style="list-style-type: none"> • understand and apply standard techniques to build computer programs that automatically improve with experience, especially for classification problems • assess the quality of a learned model for a given task • assess the relative performance of several learning algorithms • justify the use of a particular learning algorithm given the nature of the data, the learning problem and a relevant performance measure • use, adapt and extend learning software <p>Students will have developed skills and operational methodology. In particular, they have developed their ability to:</p> <ul style="list-style-type: none"> • use the technical documentation to make efficient use of existing packages, • communicate test results in a short report using graphics. <p>-----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
Evaluation methods	<p>The practical projects are worth 20 % of the final grade, 80 % for the final exam (closed book)</p> <p>Projects cannot be re-implemented for the second session.</p> <p>Hence, the project grade is fixed at the end of the semester.</p>
Teaching methods	<ul style="list-style-type: none"> • Lectures • Practical projects with semi-automatic feedback from the Inginious server https://inginius.info.ucl.ac.be/ • Query/answer sessions through a Moodle Forum
Content	<ul style="list-style-type: none"> • Decision Tree Learning: ID3, C4.5, CART, Random Forests • Linear Discriminants: Perceptrons, Gradient-Descent and Least-Square Procedures • Maximal Margin Hyperplanes and Support Vector Machines • Probability and Statistics in Machine Learning • Performance Assessment: Hypothesis testing, Comparing Learning Algorithms, ROC analysis • Gaussian Classifiers, Fisher Linear Discriminants • Bayesian Learning: ML, MAP, Optimal Classifier, Naive Bayes • Instance-based learning: k-NN, LVQ

	• Clustering Techniques
