

In view of the health context linked to the spread of the coronavirus, the methods of organisation and evaluation of the learning units could be adapted in different situations; these possible new methods have been - or will be - communicated by the teachers to the students.

10 credits

Language :	French
Place of the course	Louvain-la-Neuve
Aims	<p>The Master thesis is a relatively long-term training designed to acquire practical knowledge required for a researcher carrier... Each student will be integrated in the framework of the research activities of a host laboratory conducting their research in the fields of biochemistry and/or molecular biology. Through this hands-on training the student will acquire technical skills as well as in-depth scientific knowledge about a limited but otherwise precise research topic. The goal of the thesis is to develop the student autonomy and sense of initiative in managing a research project, to foster his critical, rigorously scientific awareness and reflections on his/her research data and related scientific literature. By the end of the training, the student should be able to design and conduct appropriate and relevant experiments to address specific scientific questions.</p> <p>1</p> <p>-----</p> <p><i>The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".</i></p>
