2020

Due to the COVID-19 crisis, the information below is subject to change, in particular that concerning the teaching mode (presential, distance or in a comodal or hybrid format).

5 credits	30.0 h + 30.0 h	Q2

Teacher(s)	Legat Jean-Didier ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	• Basic laws of electricity: electrostatic, magnetism (including an introduction to constant-order 1st order differential equations) • Electrical circuits (Sources, Kirchhoff Laws, ...) • Simulation of electrical circuits using dedicated software (p.e. Spice) • MOS transistor • Logic gates and their implementation in MOS (combinational circuits and basic sequential circuits) • Memory Points (SRAM, DRAM, Flash)
Aims	Given the learning outcomes of the "Bachelor in Computer science" program, this course contributes to the development, acquisition and evaluation of the following learning outcomes: • S1.G4 • S2.2, S2.4 Students who have successfully completed this course will be able to : 1 • explain the basic laws of electricity and electrical circuits • solve simple electrical circuits by using the fundamental laws • simulate simple electrical circuits using a software and interpret the results • characterize simple electrical circuits by explaining their operation • explain the operation of the MOS transistor as a logic switch • describe, from the combination of MOS transistors, the operation and the implementation of the basic logic gates as well as the main memory points - - - - *The contribution of this Teaching Unit to the development and command of the skills and learning outcomes of the programme(s) can be accessed at the end of this sheet, in the section entitled "Programmes/courses offering this Teaching Unit".*
Evaluation methods	**Due to the COVID-19 crisis, the information in this section is particularly likely to change.** An oral or written exam (depending on the session) will be organized, in addition to a possible ongoing evaluation. Details are defined on the course website.
