

4.00 credits

30.0 h + 15.0 h

Q2

Teacher(s)	Lavendhomme Thierry ;
Language :	French
Place of the course	Bruxelles Saint-Louis
Prerequisites	<i>The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.</i>
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>The themes studied are those found in standard textbooks on matrix calculation or linear algebra. The course also provides an introduction to linear programming.</p> <p>The course can be presented as a framework for generalizing an extremely simple model: proportionality between two variables, $y=ax$ (in order to produce an output equal to x, a quantity y of an input is required, in constant proportion a to the output).</p> <p>Another objective is to familiarise students with the calculating power of matrix formalism.</p>
Evaluation methods	<p>Summative assessment / The examination is closed book / An exam form is distributed at the examination.</p> <p>The examination includes questions to assess student's basic understanding, cross-cutting questions as well as exercise-style questions similar to those worked on in class. In most cases, questions test both theoretical knowledge and applied skills.</p>
Teaching methods	<p>All parts of the course with the exception of the part dealing with linear programming, are based on the book : «Algèbre linéaire et applications», par David Lay, Pearson, 2012. The book is available from the reprographics unit.</p> <p>The reference book contains a large number of examples and exercises some of which also provide answers. Students are also expected to undertake personal study.</p>
Content	<p>Linear equations & linear algebra.</p> <p>Linear programming</p> <p>Matrix algebra</p> <p>Determinants</p> <p>Vector spaces</p> <p>Eigenvalues and eigenvectors</p> <p>Orthogonality and least squares</p> <p>Symmetric matrices and quadratic forms</p>
Bibliography	« Algèbre linéaire et applications », par David Lay, Pearson, 2012. (Disponible à la reprographie).
Other infos	Course notes for linear programming are available at the reprographics unit.
Faculty or entity in charge	ESPB
