Ibral2202

2023

Technological quality control

2.00 credits 30.0 ft Q1

Teacher(s)	Baeten Vincent ;				
Language :	French				
Place of the course	Louvain-la-Neuve				
Prerequisites	Precursory courses	Basic courses in analytical chemistry, food chemistry, food technology			
	Supplemental courses	Statistical control of quality			
	Evaluation	Written and oral examination			
	Support	Syllabus and i-Campus documents			
	Teaching team	Professor			
Main themes Learning outcomes	The main themes presented in the course are: - the total quality management in food factory; - the control of - hygienic quality, - nutritional quality, - sensory quality, - technological quality (reduced in partim BRAL2202A); - the determination of - water, - protids, - lipids, - glucids, - minerals, - vitamins; - the instruments of on line process control (reduced in partim BRAL2202A); - the chemometric calibration of the control instruments (reduced in partim BRAL2202A). At the end of this learning unit, the student is able to: At the end of this course, the students will have e good knowledge and a critical view of the analytical tools useful in the setup of quality insurance policy based on the analysis of products in quality control laboratory and on line process control. They will be also able to interpret and exploit the data acquired by				
Teaching methods	·	and developed for the control in laboratory and on line. stration of instruments and data treatment in laboratory.			
	Content: the above cited themes will be teached and applied in demonstrations and study of real cases in				
Content	laboratory.	caunca and applied in demonstrations and study of real cases in			
Faculty or entity in charge	AGRO
