Q1

Teacher(s)	Fustin Charles-André ;Garcia Yann ;
Language :	English > French-friendly
Place of the course	Louvain-la-Neuve
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>1 This course not only aims at giving a large introduction to the main instrumental analysis methods of solids but also aims at directing an analysis towards the most appropriate solutions. The emphasis is shed on principles, application ranges, possibilities and limitations of each technique.</p>
Evaluation methods	oral or written exam according to the number of students Oral presentation of a project.
Teaching methods	classic or reverse classes.
Content	<p>I. Thermal analysis methods : thermogravimetric analysis (TGA), thermodifferential analysis (TDA), differential scanning calorimetry (DSC)</p> <p>II. Mössbauer spectroscopy and applications in chemistry, solid state sciences, environmental sciences and mineralogy.</p> <p>III. X-Ray absorption spectroscopy : EXAFS, XANES and WAXS</p> <p>IV. Powder X-Ray diffraction and X-ray fluorescence</p> <p>V. Surface analysis and microscopies : X-ray photoelectrons spectroscopy (XPS), Auger electron spectroscopy (AES). Secondary ions mass spectrometry (SIMS). Specific surface measurement (BET). Scanning electronic microscopy (SEM). Transmission electronic microscopy (TEM). Atomic force microscopy (AFM)</p>
