

Physical organic chemistry

3.00 credits

22.5 h + 7.5 h

Q1

Teacher(s)	Robiette Raphaël ;			
Language :	English > French-friendly			
Place of the course	Louvain-la-Neuve			
Main themes	This course is aimed to a synthesis of various notions related to physical organic chemistry and already introduced in the various courses from the preceding years. It also gives an introduction to some selected physico-chemical tools used in the elucidation of reaction mechanisms in organic chemistry. The main themes are : - Structure -activity relationships in organic chemistry - Electronic and sterics effects - Influence of the reaction media in organic chemistry - Stereoelectronic effects in organic chemistry			
Learning outcomes	At the end of this learning unit, the student is able to : The aim of this course is to introduce important notions and concepts selected in the field of physical organic chemistry. One of the goals of this course is to use those notions for a better understanding of reaction mechanisms in organic chemistry, the structure of reaction intermediates and transition states, and a deeper understanding of the molecular interactions which can influence chemical reactivity.			
Evaluation methods	Written exam which can be completed by an oral exam			
Content	The course is build around the following chapter : 1. Reminders 2. Stereoelectronic effects 3. Linear Free Energy Relationships (LFER) 4. Mechanistic studies			
Inline resources	Review articles as well as the slides of the course are available on moodle. https://moodleucl.uclouvain.be/course/view.php?id=7943			
Bibliography	Le cours ne fait appel à aucun support particulier qui serait payant et jugé obligatoire.			
Other infos	Background required: knowledge of organic chemistry from the previous years (Bachelor of Chemistry) and LCHM2140			
Faculty or entity in charge	СНІМ
