## Icomu2812

2023

## Expérience utilisateur

5.00 credits	30.0 h	Q2

Teacher(s)	Kieffer Suzanne ;				
Language :	French				
Place of the course	Louvain-la-Neuve				
Main themes	<ul> <li>Foundations and definitions of the user experience</li> <li>User experience measures</li> <li>User experience evaluation methods</li> <li>Planning, data analysis and presentation of results</li> <li>Integration of the user experience evaluation process into the development of interactive systems</li> </ul>				
Learning outcomes	At the end of this learning unit, the student is able to :				
	List and define the conceptual elements and metrics of the user experience;				
	Distinguish user experience evaluation methods in terms of purpose (goal), objectives (means to reach goal), type of collected data, and deliverables;				
	3. Compare several methods, select the most efficient, argue the choice ;				
	Plan and conduct the evaluation of an interactive system and propose solutions improving the user experience with this system.				
Evaluation methods	Continuous assessment without examination in June in three modes: knowledge tests (40% of final grade), group work in session (30% of final grade) and asynchronous group work (30% of final grade). In September, custom-made individual work to be handed in on the first day of the session.				
Teaching methods	The pedagogical approach is blended teaching, which alternates face-to-face classroom teaching with online distance learning via Microsoft Teams. Teaching methods include flipped classroom and project-based learning:  • Flipped classroom: students study or complete an assignment at home and then meet with teachers and peers in a classroom to ask questions, get extra help or work in groups;  • Project-based learning: students develop a project by combining online learning (e.g. watching tutorials or completing assignments) and face-to-face meetings.				
Content	Foundations and definitions of the user experience User experience measures User experience evaluation methods Planning, data analysis and presentation of results Integration of the user experience evaluation process into the development of interactive systems				
Inline resources	Moodle (asynchronous): course slides, bibliographic resources, calendar, models and rubrics, H5P exercises, tests, assignments, workshops with peer assessment, Q&A forum Microsoft Teams (live): calendar, meetings, documents, discussion, lecture notes Web links: how-to videos, websites, online software
