

Teacher(s)	de Wasseige Gwenhaël ;
Language :	English > French-friendly
Place of the course	Louvain-la-Neuve
Main themes	<ul style="list-style-type: none"> <li>' Short overview of astronomy and its basic concepts.</li> <li>' Formation and evolution of stars ; stellar collapses.</li> <li>' Neutron stars, pulsars and black holes.</li> <li>' Galaxies and galactic centers ; dark matter and cosmic rays.</li> <li>' Binary systems and gravitational waves.</li> <li>' Cosmic microwave background radiation and evolution of universe.</li> </ul>
Learning outcomes	<p><b>At the end of this learning unit, the student is able to :</b></p> <p><b>a. Contribution of the teaching unit to the learning outcomes of the programme (PHYS2M and PHYS2M1)</b></p> <p>AA1 : A1.2, A1.6                  AA2 : A2.1, A2.5                  AA3 : A3.1, A3.2, A3.3, A3.4                  AA4 : A4.1, A4.2                  AA5 : A5.1, A5.2, A5.3, A5.4                  AA6 : A6.1                  AA7 : A7.1, A7.3, A7.4                  1 AA8 : A8.1</p> <p><b>b. Specific learning outcomes of the teaching unit</b></p> <p>By the end of this teaching unit, the student will be able to :</p> <ol style="list-style-type: none"> <li>1. apply fundamental physics laws for modeling crucial phenomena in astrophysics ;</li> <li>2. explain and discuss the roles of both nuclear reactions and fundamental interactions in stellar evolution ;</li> <li>3. explain and discuss the specific mechanisms behind the variety of major phenomena in astrophysics ;</li> <li>4. further the study of a specific topic of modern astrophysics ;</li> <li>5. relate the contents of the course to current developments in astrophysics as well as in astroparticle physics.</li> </ol>
Evaluation methods	Individual oral exam based on scientific paper readings and discussion.
Teaching methods	Traditional lectures in class and flipped classrooms. Reading portfolio for personal study.
Content	<ul style="list-style-type: none"> <li>• Fundamental notions of astronomy, units and variables, basic measurements ; star catalogues (spectra &amp; luminosities); Hertzsprung-Russell diagram.</li> <li>• Star formation mechanisms; nuclear fusion and star evolution ; astrophysics of the Sun and solar neutrinos..</li> <li>• Particles and radiation in the cosmos: electromagnetic emission, particle acceleration, interaction, and propagation, dark matter detection.</li> <li>• Galactic and extragalactic high-energy phenomena: interstellar medium and magnetic fields, accretion power, supernovae, neutron stars, white dwarfs, black holes, active galactic nuclei,...</li> <li>• Multi-messenger astronomy: first detected sources, theoretical implications, alert systems, real-time astronomy,...</li> </ul>
Bibliography	<ul style="list-style-type: none"> <li>• D. Perkins, <i>Particle Astrophysics</i> (Oxford master series).</li> <li>• M. Longair, <i>High Energy Astrophysics</i> (Cambridge University press).</li> <li>• M. Spurio, <i>The Probes of Multi-Messenger Astrophysics</i> (Springer, 2020).</li> </ul>
Faculty or entity in charge	PHYS
