Q1

Gestion de projet

Teacher(s) Godart Jacques ; Tancrez Jean-Sébastien (coordinator) ; Language : French Place of the course Mons Basic notions of mathematics, probability theory and statistics. Prerequisites For the majority, projects are ubiquitous in the professional and economic life as well as in the private Main themes life. The economic environment being more and more complex and competitive, systematic and structured project management is essential to succeed in projects that are increasingly strategic, multidisciplinary, specific, challenging, and under resource and time constraints. Accordingly, project management gains more and more in importance in the career of a business manager. In this course, several topics will be addressed, following the different stages of a project: - The importance of project management and the organizational structures - The project definition and the evaluation of its duration and cost - Project planning methodologies - Risk management in projects - Resource scheduling - The reduction of a project duration - The control and closing of a project At the end of this learning unit, the student is able to : Learning outcomes At the end of this course, the student is able to: - Recognize the context in which a project evolves, so that its management fits its strategic importance. - Define completely a project and use adequate methods to evaluate its duration and cost. - Plan the succession of activities of a project, skillfully applying basic methodologies. 1 - Identify, assess and manage risks in a project, in order to limit their impact on the project success. - Recognize and compute the impact of limited resources on the planning of a project. - Choose and apply adequate approaches to decrease the duration of a project, comparing this decrease with the involvements on the costs. - Measure and control the progress of a project, in order to adopt proper corrective actions. Evaluation methods In-session written exam and group work (single assessment). The in-session written exam counts for 70% of the final mark, and the group work for 30% of the final mark. A detailed presentation of the work will be provided at the beginning of the course. A written report and an oral presentation are expected (in December). The work can only be submitted and presented once (in December); there is no possibility of submitting the work on another date. Lectures, exercises, software training, group work. Teaching methods For many people, projects are an integral part of their professional, business and personal lives. As the economic Content environment becomes ever more complex and competitive, methodical and structured project management is essential to the successful completion of projects that are increasingly strategic, multidisciplinary, specific, demanding and subject to resource and deadline constraints. Project management is becoming an increasingly important and crucial part of the management profession. In this course, several interdependent themes in project management will be covered: The concept of a project . The organisational context of a project Defining a project · Assessing the duration and cost of a project Project planning Project risk management Resource scheduling Reducing project duration · Project control and closure · Strategic project alignment and project portfolio management
