Microbiologie générale (partim théorie)

202

Teacher(s)	Michiels Thomas ;			
Language :	French			
Place of the course	Bruxelles Woluwe			
Prerequisites	 Principles of biology and basic biochemistry (nature and function of macromolecules: proteins, sugars, lipids metabolism; biological membranes; energy) Cellular biology: compartments of the cell, membranes, transport, function of organelles Molecular biology: principles of gene expression in bacteria and in eucaryotes The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unitare specified at the end of this sheet. 			
Main themes	Table of contents: A. General introduction 1. Discovery and description of microorganisms 2. Definition of Microbiology (Eucaryotes versus procaryotes; viruses versus bacteria) B. Bacteriology 1. Growth of bacteria a. Growth conditions (temp., pH, salinity, pressure') b. Nutrients c. Growth curve d. Methods used to measure bacterial growth e. Evolution 2. Structure of bacteria a. Size and shape b. The bacterial cell: Cytoplasm components - Plasma membrane (phospholipid bilayer) and proteins (F0F1 ATP synthetase, respiratory chain components permeases, export and secretion factors) Bacterial wall: Peptidoglycan, Gram staining Morphology of Gram-positive bacteria (including periplasm, outer-membrane, LPS) Surface structures (plii, flagellum, capsule) - Spores - At the community level: formation of biofilms 3. Membranes and transport of molecules a. Import - Porins and surface receptors (gram-negative) - Permeases (H+ symporters, ATPase-driven, phosphorylation-driven: PTS) b. Export and secretion - The Sec-dependent pathway - Secretion systems in Gram-negative bacteria 4. Genetic information a. The E. coli chromosome, its replication and error rate of polymerases b. Plasmids (replication, coding capacity, copy number, compatibility) c. Expression of bacterial genes (transcription and translation signals) d. Transcription regulation: - operon (ex. the lactose operon concept) - regulon (ex. SoS response, "igma""") - two-component systems (phosphorelays) """" """" e. Mutations			

I	f. Bacteriophages				
	- ', lytic cycle and lysogeny				
	g. Transfer of genetic information				
	- transformation, transduction, conjugation, transposition				
	- limitation of genetic transfer (restriction-modification, the CRISPR-Cas system)				
	5. Anti-bacterial agents and antibiotics				
	a. Disinfectants and antiseptics (chemicals, heat, filtration, UV and gamma radiations)				
	b. Antibiotics: antibiotic examples, targets and mode of action				
	- metabolism				
	- replication and transcription				
	- Ribosomes				
	- cell wall synthesis				
	- membranes				
	c. Antibiotic resistance				
	- antibiotic inactivation				
	- target modification or overproduction				
	- target replacement				
	- efflux pumps				
	d. Abuse and misuse of antibiotics, and origin of resistances				
	C. Virology				
	1. General introduction				
	a. Historical discoveries in Virology				
	b. Virion morphology and structure (components : nucleic acids, capsid, envelope)				
	c. The viral cycle: Attachment, uncoating and entry, gene expression, réplication, assembly, egress (according to the nature of the virus)				
	,				
	d.Transmission and propagation				
	e. Classification				
	2. Selected examples illustrating the diversity of replication cycles according to the genome and virion				
	properties.				
	a. SV40, a small non-enveloped DNA virus				
	b. poliovirus, a positive-stranded non-enveloped RNA virus				
	c. influenza, a segmented, negative-straded RNA virus				
	d. HIV, a lentivirus (example of retrovirus)				
	Practicals on bacteriology, gene transfer and antibiotic resistance are organized as part of this course				
Learning outcomes					
	The exam is erganized as a written exam. The exam includes a section with multiple choice questions (10 to 12)				
Evaluation methods	The exam is organized as a written exam. The exam includes a section with multiple choice questions (10 to 12 points /20), and a section with short open-ended questions and/or exercices in which students will be evaluated on their capacity to implement their knowledge.				
Teaching methods	Lectures and tutorial classes				
J	(possibly by Teams or life+streaming according to the COVID evolution)				
	1. 1				
Content	Introduction to the world of viruses and bacteria. Topics include :				
	- structure and organization of typical bacteria (Gram+ or Gram-)				
	- bases of bacterial functioning (compartmentalization, transport, energy)				
	- nature, functioning, and evolution of bacterial (and bacteriophage) genomes				
	- DNA transfer within the bacterial cell and between bacteria				
	- priniciples of antibiotics activity, and development of antibiotic resistance				
	- structure, organization and mode of replication of viruses that infect eucaryotic cells				
	- functioning of viruses and consequences of the infection, based on selected examples				
Inline resources	Files with informations, exercices and with slides presented in the course are available on MoodleUCL (https://				
mano resources	moodleucl.uclouvain.be/).				
	Syllabus (texte + illustrations présentées au cours), disponible sur Moodle				
Bibliography	Site Web d'initiation à la virologie (+ tests et quiz)				
	http://www.virologie-UCLouvain.be
