Language :	French
Place of the course	Bruxelles Woluwe
Main themes	The diseases/conditions addressed are conditions frequently encountered in the hospital setting, and for which drug treatment has an important role in the general management of the disease/condition. Partim fluid and electrolytes disorders: Pathophysiology and treatment of edema, dehydration, hypo- and hyper-natremia, hypo- and hyperkalemia, and acid-base disorders.
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>Upon completion of this course, students should be able to : - to briefly describe the epidemiology, etiology, pathophysiology, and clinical presentation of the diseases/conditions addressed during the lectures - to detail the pharmacotherapy for each disease/condition, and to apply this to hospitalised patients. Partim fluid and electrolytes disorders: Understanding the pathophysiology and learn the diagnostic/therapeutic attitude when facing disorders of the water/salt metabolism and electrolyte disorders.</p>
Evaluation methods	<p>In this course, students are assessed in two ways</p> <ul style="list-style-type: none"> - a compulsory assignment (2/10 of the final grade) - a written examination, in session (18/20 of the final grade).
Content	<p>For each pathology: (a) notions on epidemiology, etiology, symptomatology and complications, pathophysiology, global therapeutic approach; (b) drug treatments, treatment algorithms, evidence-based medicine.</p> <p>Partim Medical Semiology: Physiopathology and treatment of oedemas, dehydration, natremia, kalemia, and disturbances of the acid-base balance.</p> <p>Teaching based on physiopathology, using clinical cases and examples. Diagnostic approach, treatment principles.</p> <p>EBM literature search.</p> <p>Writing of a pharmacotherapy report.</p>
