Q1

This learning unit is not open to incoming exchange students!

|                     |  |
|---------------------|--|
| Teacher(s)          | Hainaut Donatien ;   |
| Language :          | French   |
| Place of the course | Louvain-la-Neuve   |
| Prerequisites       | LAUT2030 Actuarial de l'assurance-vie<br>LAUT2170 Valorisation financière des engagements actuariels.  |
| Main themes         | Jump-diffusion and Lévy or stochastic volatility processes, valuation of participating contracts with stochastic interest and mortality rates and hedging.   |
| Learning outcomes   |  |
| Evaluation methods  | The assessment consists of a project and of a written exam for which the student has a form. The instructor reserves the right to orally question the student both on the exam answers and on the project content.   |
| Teaching methods    | The course consists of 13 theoretical lessons which the student is required to attend.   |
| Content             | <p>The course contains two parts, respectively dedicated to Lévy processes and to the valuation of life-insurance contracts in hybrid rate-stock models.</p> <p>Part 1 : Lévy process</p> <ul style="list-style-type: none"> <li>• Introduction &amp; review of probability concepts</li> <li>• Lévy processes : first contact</li> <li>• Valuation by simulations with jump-diffusions (Ratchet GMAB)</li> <li>• Estimation of a jump-diffusion under the real measure</li> <li>• Lévy process &amp; infinite divisible distributions</li> <li>• Subordination</li> <li>• Valuation by simulations with VG and NIG (unit-linked contract with lookback guarantee)</li> <li>• Estimation of VG and NIG under P</li> <li>• Jump measures &amp; Lévy-Itô decompositions</li> <li>• Stochastic calculus for Lévy processes</li> </ul> <p>Part 2 : Life insurance engineering &amp; hybrid models</p> <ul style="list-style-type: none"> <li>• Short reminder about IR, change of numeraire and B&amp;S</li> <li>• GMAB valuation in a hybrid Hull &amp; White model</li> <li>• Estimation of the HW hybrid model &amp; numerical GMAB valuation</li> <li>• The HJM framework for interest rates</li> <li>• Valuation of hybrid products in a HJM G2++ framework</li> <li>• Estimation of the G2++ hybrid model &amp; GMAB valuation</li> <li>• Forward rates</li> <li>• Libor forward model (LFM)</li> <li>• LFM estimation under P</li> <li>• Participating contracts with caps, floors in the LFM (Cash-Max insurance)</li> <li>• GMAB in a hybrid LFM.</li> <li>• Hybrid LFM estimation under P &amp; GMAB valuation</li> <li>• Introduction to stochastic volatility: Heston model</li> </ul> |
