

3.00 credits

30.0 h

Q2

This learning unit is not being organized during this academic year.

Language :	French > English-friendly
Place of the course	Bruxelles Saint-Gilles
Main themes	<p>The course is designed to train future architects to use tools for the analysis and design of an environment created by being able to use the space-light-colour dimension. More specifically the relationship between space and light, both natural and artificial and the relationship between space and colour, light and matter.</p> <p>We will develop the following topics:</p> <ol style="list-style-type: none"> <li>1. Definition of light and colour as a perceptual phenomenon, establishing the space and generating architectural atmosphere</li> <li>2. Spatial and perceptual analysis of architectural examples using light and colour from the beginning of the design process</li> <li>3. Experimentation showing the spatial relationship between light, both natural and artificial and colour, light and matter</li> <li>4. Use of special software, tools for design and expressing architectural atmosphere</li> <li>5. Establishment of typologies of atmosphere and their photometric and colorimetric, graphic and spatial characteristics</li> <li>6. Design of light and colour plans with spatial characteristics defined with regard to human factors.</li> </ol>
Learning outcomes	<p><b>At the end of this learning unit, the student is able to :</b></p> <p><b>Specific learning outcomes:</b></p> <p>By the end of this course, students will be able to</p> <ul style="list-style-type: none"> <li>• list the characteristic features of atmospheres generated by light and colour.</li> <li>• identify the perceptual parameter of spatial perception.</li> <li>• interpret strategies for choosing light and colour.</li> <li>• test different perceptual atmospheres, using appropriate tools.</li> <li>• draw up light and colour plans with specific spatial characteristics.</li> <li>• set out strategies for choosing atmospheres using light and colour.</li> </ul> <p><b>Contribution to the learning outcomes reference network:</b></p> <p><b>Design a project</b></p> <p>Adopt approaches which are methodical, creative, metaphorical, perceptive, collaborative etc.</p> <p>1 <b>Test an artistic approach</b></p> <ul style="list-style-type: none"> <li>• To imagine drivers which can transform the perception of what is real</li> </ul> <p><b>Place the action</b></p> <ul style="list-style-type: none"> <li>• Experiment with the possibilities of transforming a context</li> </ul> <p><b>Make use of other subjects</b></p> <ul style="list-style-type: none"> <li>• Make strategic use of other subjects to put into question the design and implementation of an architectural project</li> </ul> <p><b>Express an architectural procedure</b></p> <ul style="list-style-type: none"> <li>• Identify the founding elements of a hypothesis or a proposal to express and communicate them</li> </ul>
