

Teacher(s)	Bodart Vincent ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	The main focus of the course is the analysis of the economic business cycle, that is the succession over time of periods of expansion and periods of recession. The course is divided in two parts. The first part is devoted to the presentation of some important stylized facts about the economic business cycles in the advanced economies and to the analysis of the principal economic mechanisms that are considered to be at the origin of business cycle fluctuations. In the second part, we will examine the tools and methodologies that are necessary to build a rigorous conjonctural analysis and to establish short-term macroeconomic forecasts
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>The course has two main objectives : (1) analyze the principal economic mechanisms that are at the origin of business cycle fluctuations ; (2) give students the tools and methodologies that are necessary to build a rigorous conjonctural analysis and to establish short-term macroeconomic forecasts.</p>
Evaluation methods	<p>Learning outcome</p> <p>At the end of the course, students are supposed to have a good understanding of what are the principal economic mechanisms that are at the origin of business cycle fluctuations. Students are also supposed to know how to use properly the tools and methodologies that are necessary to build a rigorous conjonctural analysis and to establish short-term macroeconomic forecasts.</p> <p>Evaluation procedure</p> <p>The evaluation is composed of a written exam (syllabus and readings) and the report of the case study (work in group). The weight of the case study report in the final grade will be communicated precisely during the class.</p> <p>If, for whatever reasons, a student has not undertaken the case study and/or has a grade of "0" at the written exam because of absence or "cote de présence", its final note will be 0/20.</p> <p>A student who has not undertaken the case study during the course period will not be allowed to realize individually the case study for the second examination period (within a same academic year).</p> <p>If a student fails during its first participation at the exam but has undertaken the case study, he will only be allowed to undertake the written exam during its second participation at the exam (within the same academic year). The note of the case study will be unchanged.</p> <p>Regarding the use of IA, the rules fixed by the Faculty, which are described precisely in a note which is available on the Faculty intranet for students, will apply. In addition, the use of IA will be prohibited for the realisation and the writing of the case study.</p> <p>Depending on the evolution of the epidemic crisis, it may be decided to cancel the written exam or to replace the written exam by an additional work to be achieved in groups (the groups will be the same as for the case study). If the exam is replaced by a work, the students will be informed on due time about the content of the new assignment. The students will also be informed about the weight of this new work with respect to the case study. The other evaluation rules will still apply.</p>
Teaching methods	A syllabus is available and a list of additional readings is provided. Within Part I, the students will have to work by groups on a case study.
