## Architecture : rénovation, restauration

3.00 credits 22.5 h Q2

## (!)

## This biannual learning unit is not being organized in 2024-2025!

Teacher(s)	Mairy Cécile ;					
Language :	French					
Place of the course	Louvain-la-Neuve					
Learning outcomes						
Evaluation methods	Assessment will be by written examen.					
Teaching methods	Teaching is mainly through lectures. However, this is supplemented by visits to remarkable buildings and/or sites (in Belgium). These visits are intented to illustrate the concepts presented in the lectures and to specify the similarities and/or differences between this type of project and more traditional architectural design briefs.					
Content	The purpose of the LICAR2831 course on restoration and renovation is to introduce the students the theoretical notions of immovable cultural heritage (history of conservation, restoration theories, charters, etc) and more specifically on certain aspects (challenges of heritage projects, characteristics of materials, diagnosis of deterioration, compatibility / durability / etc of differents approaches, thoughts on structural composition, etc), and to initiate them in the preliminary studies necessary for a proper understanding of the structures concerned and to make them aware of the problems associated with conserving, restoring and improving the property while complying with certain current requirements / restrictions.					
	Class 1 Notion of heritage					
	Introduction (course structure, general context)					
	Philosophical bases of conservation and restoration					
	Restoration theories					
	Class 2 Restoration project process					
	Overview of the methodology					
	Initial studies (historical study, analysis of the existing situation					
	Class 3 Restoration project process					
	Initial studies (continued)					
	Class 4 Restoration project process					
	Initial studies (continued)					
	Building improvement					
	Scheduling					
	Philosophy of intervention (orientation/direction/motivation)					
	Options of intervention					
	Illustration/actual case histories					
	Class 5 Building/site visit					
	Application of the approach presented in classes 1-2-3-4					
	Class 6 Heritage and current issues					
	Identification and impact of current issues					
	Ovrview of standards/regulations/recommendations/requirements/etc relating to space, physical behaviou energy, safety (fire, personal injury, etc), materials, know-how, budget, contract times, etc					
	Proposed solutions					
	Class 7 Building/site visit					
	Application of the approach presented in classes 1-2-3-4-6					
	Class 8 Heritage and current issues					
	Heritage and energy					
	Presentation of heritage buildings with improved energy performance					
	Proposed solutions					
	Class 9 Heritage and current issues					
	Heritage and modernism					
	Presentation of problems encountered on Modernist or associated style buildings					
	1 recontaction of problems encountered on modernial of associated style buildings					

Université catholique de Louvain - Architecture : rénovation, restauration - en-cours-2024-licar2831

	Class 10 Buildint/site visit  Application of the approach presented in classes 1-2-3-4-6-8-9  Class 11 Related frameworks  Overview of legislation in Belgium, working methods, procedures, etc  Presentation of national and international restoration/renovation project "references"  Class 12 Exercise  Application/implementation in groups			
Other infos	The classes are given on the basis of PowerPoint documents indicating key elements, illustrations, issues for consideration, specific extracts, etc. that are sent to the students prior the course concerned.			
Faculty or entity in charge	LOCI
