

4.00 credits	15.0 h + 5.0 h	Q1
--------------	----------------	----

Teacher(s)	Pircalabelu Eugen ;
Language :	French
Place of the course	Louvain-la-Neuve
Prerequisites	Concepts and tools equivalent to those taught in teaching unit LSTAT2014 : Eléments de probabilités et de statistique mathématique
Main themes	<p>The themes of touched upon in the classroom are :</p> <ol style="list-style-type: none"> 1. Parametric vs nonparametric statistics 2. Nonparametric estimation of a cumulative distribution function 3. Location problems: the one-sample setting 4. Location problems: the two-sample setting 5. Location problems: the K-sample setting 6. Dispersion problems: the two-sample setting 7. Goodness of fit testing 8. Association analysis
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>The students will obtain knowledge about the basic concepts of nonparametric statistical inference. They will learn about elementary nonparametric testing procedures. They will be able to use these nonparametric procedures for analyzing real data, and this by using, for example, statistical software packages.</p> <p>1</p>

Faculty or entity in charge	LSBA

Programmes containing this learning unit (UE)				
Program title	Acronym	Credits	Prerequisite	Learning outcomes
Master [120] in Statistics: Biostatistics	BSTA2M	4		
Master [120] in Mathematics	MATH2M	4		
Master [120] in Statistics: General	STAT2M	4		
Master [120] in Economics: General	ECON2M	5		
Certificat d'université : Statistique et science des données (15/30 crédits)	STAT2FC	4
