Econométrie

5.00 credits	30.0 h	Q1

Teacher(s)	De Winne Rudy ;
Language :	French
Place of the course	Charleroi
Main themes	Linear regression • Revision of the method of least squares applied to the estimate of the regression line; • Generalisation of the regression analysis in the multivariate case; • Properties of parameter estimators; • Formulation and logical test of hypothesis relating to parameters; • Linearisable multivariate models.
Learning outcomes	**At the end of this learning unit, the student is able to :** On completion of this course, students will be able: in terms of knowledge: • to apply the principles and method of the multiple regression estimation models, both linear or linearised, to one or more explanatory variables. 1 in terms of skills: • to ask pertinent questions, from a managerial perspective, regarding a proposed case and the characteristics of available data; • to select the appropriate statistical approach and apply it; • to provide methodologically correct answers to the problem posed after disciplined interpretation of results both statistically and at a managerial level.
Bibliography	• JOHNSTON J., DINARDO J. (1999), Méthodes Econométriques, Economica, traduction de JOHNSTON J., DINARDO J. (1997), Econometric Methods, 2th ed. Mc Graw'Hill.
Faculty or entity in charge	CLSM
