

The version you're consulting is not final. This course description may change. The final version will be published on 1st June.

5.00 credits

30.0 h

Q2

Teacher(s)	Kieffer Suzanne ;
Language :	French
Place of the course	Louvain-la-Neuve
Main themes	<ul style="list-style-type: none"> · Foundations and definitions of the user experience · User experience measures · User experience evaluation methods · Planning, data analysis and presentation of results · Integration of the user experience evaluation process into the development of interactive systems
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <ol style="list-style-type: none"> 1. List and define the conceptual elements and metrics of the user experience ; 2. Distinguish user experience evaluation methods in terms of purpose (goal), objectives (means to reach goal), type of collected data, and deliverables ; 3. Compare several methods, select the most efficient, argue the choice ; 4. Plan and conduct the evaluation of an interactive system and propose solutions improving the user experience with this system.
Evaluation methods	<p>Continuous assessment without examination in June following two modes: knowledge tests (40%), and group and/or individual assignment (60%). In September, a custom-made individual assignment (i.e., based on failed modes) must be submitted on the first day of the session.</p> <p>The use of artificial intelligence (AI) tools must comply with the guidelines established by the ESPO faculty. It is permitted as a writing aid (e.g., text improvement, translation) and for information retrieval. For the submission of certain assignments, the instructor defines the other authorized uses (e.g., idea exploration, brainstorming, image or text generation).</p>
Teaching methods	<p>The pedagogical approach is blended teaching, which alternates face-to-face classroom teaching with online distance learning via Microsoft Teams. Teaching methods include flipped classroom and project-based learning:</p> <ul style="list-style-type: none"> • Flipped classroom: students study or complete an assignment at home and then meet with teachers and peers in a classroom to ask questions, get extra help or work in groups; • Project-based learning: students develop a project by combining online learning (e.g. watching tutorials or completing assignments) and face-to-face meetings.
Content	<p>Foundations and definitions of the user experience User experience measures User experience evaluation methods Planning, data analysis and presentation of results Integration of the user experience evaluation process into the development of interactive systems</p>
Inline resources	<p>Moodle (asynchronous): course slides, bibliographic resources, calendar, models and rubrics, H5P exercises, tests, assignments, workshops with peer assessment, Q&A forum Microsoft Teams (live): calendar, meetings, documents, discussion, lecture notes Web links: how-to videos, websites, online software</p>
