5.00 credits	30.0 h	Q2
--------------	--------	----

Teacher(s)	Ducarroz Caroline ;
Language :	French
Place of the course	Mons
Main themes	This course is organized around a strategic business game, in which groups of students (4 or 5 students on average - each group managing a virtual company), compete on one or two competitive markets (Markstrat environment). The course underlines strategic marketing aspects of company management. The business game is far from being an end in itself: it helps as an exploration field, in order to go deeper in theoretical concepts linked to strategy, and put them in perspective with the situation of their virtual company.
Learning outcomes	<p>At the end of this learning unit, the student is able to :</p> <p>Competencies Given the « competencies referential » linked to the LSM <i>Master 120 in Sciences de Gestion et in Ingénierat de Gestion</i>, this course mainly develops the following competencies:</p> <ul style="list-style-type: none"> • 2. Master multidisciplinary body of knowledge; • 6. Integrate and work in a team; exercise enlightened leadership; • 7. Define and manage a project to completion; • 8. Communicate effectively and convincingly; • 9. Be able to adapt to new settings. <p>Learning outcomes At the end of the class, students will be able to:</p> <ol style="list-style-type: none"> 1 • analyze the potential strategic options for a company/organization, especially linked on its positioning on a market and the customer market segmentation; • build the most adequate strategy for a company/organization, in a competitive and moving environment; • Put in perspective theoretical concepts on Strategy and managing a virtual company, by applying theoretical constructs linked to strategic management to the situation of the virtual company; • master advanced marketing studies, and connect the results provided by these studies; • point out and focus on pieces of information that enrich their thoughts and allow them to reach their goal, while they get overwhelmed by information; • develop and implement ideas around a product portfolio; • develop critical point of views; • reconcile the different points of view expressed by the members of the team; • anticipate and organize their work, under pressure of time; • summarize their thoughts in a clear way, provide arguments for each choice, and communicate them in an efficient way, verbally as well as in written reports. • Evaluate and appreciate the relevance of their choices, <i>a posteriori</i>.

<p>Evaluation methods</p>	<p>Student evaluation will be determined by:</p> <p>(1) a group on-going evaluation (60% of the final grade) . More specifically, the evolution of the following elements will be assessed:</p> <ul style="list-style-type: none"> • Progression in terms of results (company performance) • Thorough understanding and application of the theoretical concepts • Strategic reasoning (consistence in decisions, relevance in the positioning of brands in the different markets, attitude towards risk, learning from mistakes); • Group dynamics; • Challenges and intermediate reports. <p>1. An individual on-going evaluation (20% of the final grade) , based on oral interactions.</p> <p>2. A written final report (20% of the final grade - to be handed in before the exam session) .</p> <p>If the student did successfully pass the 3 evaluation activities, the integrated method mentioned above (group on-going evaluation 60% - individual on-going evaluation 20% - written final report 20%) will be applied. If the student got a failure grade on the individual on-going evaluation, the final grade will be a failure (corresponding to the grade obtained on individual on-going evaluation).</p> <p>More information on team work and individual report instructions will be provided during the first class session.</p> <p>This system of on-going evaluation requires student's participation to each session.</p> <p>In case a student does not get a sufficient grade to get credited for this class, and if s/he wants to be able to improve his/her grade for the current academic year, s/he will be asked to elaborate an extra individual written report, whose grade will replace the grades obtained in (2) and (3) - individual on-going evaluation and written final report. S/he won't be able to improve the grade obtained for the group on-going evaluation.</p> <p><i>Note: In the group/team work assigned in this course, information sources must systematically be cited, according to the academic references standards. In case the student has used a generative AI, s/he must systematically mention the parts of his/her work in which s/he used this tool, by adding a bottom page note indicating if the generative AI tool has been used and the purpose of this use (information search, text writing and/or text revising). The student remains responsible for the content of its production, independently of the references used. Thus, by submitting a team/group or individual work report for evaluation, the student asserts that: (i) it accurately reflects the phenomenon studied, and to do so, s/he must have verified the facts; (ii) s/he has respected all specific requirements of the work assigned to her/him, in particular requirements for transparency and documentation of the scientific approach implemented. If any of these assertions are not true, whether by intent or by negligence, the student has violated his/her commitment to truth with respect to the piece of knowledge produced in the context of his/her work, and possibly to other aspects of academic integrity, which constitutes academic misconduct and will be considered as such.</i></p>
<p>Teaching methods</p>	<p>This course alternates verbal interactions between the professor and each group of students (discussions), carrying out written reports (with "challenges" to fulfil), a system of inverted class (short tutorials/videos on some theoretical concepts, to be viewed between sessions), feedback provided to groups and global theoretical deepening. So, students have to make preparation work, individually, before some of the sessions, and have systematically to carry out group work after each session (intermediate reports and final report).</p> <p>The course is organized around 4-hour sessions, in rooms whose design is appropriate for group thinking and interactions.</p>
<p>Content</p>	<p>After a session devoted to an introduction to the business game Markstrat, each group acts as a company active in a specific industry, in order to maximize the value of products for customers and the value of the company for shareholders.</p> <p>During each session, students present the evolution of the strategy of their company, argue for their choice (depending on the changing competitive environment), and state their strategy on an operational level.</p> <p>Students interact with the professor and/or a teaching assistant during each session, about their strategic analysis of the market and the situation of their company.</p> <p>Feedback is given during each session on the decisions made during previous sessions, and on the theoretical concepts used by students. Theoretical points are underlined by the teacher at the beginning of sessions, and also after sessions, through a system of inverted classes (videos, tutorials, etc).</p>

<p>Bibliography</p>	<p>La liste qui suit est loin d'être exhaustive. Les sources citées peuvent s'avérer intéressantes pour tout étudiant désireux d'en savoir davantage sur les sujets abordés.</p> <p>Attention : il est demandé aux étudiants de lire, en préparation du cours, les chapitres 7 et 8 de « Stratégique » (auteurs : G. Johnson and K. Scholes, 13ème édition ou édition précédente – notez que le nombre d'auteurs varie selon l'édition), portant sur « Les Stratégies par domaine d'activité » et « La stratégie au niveau de l'entreprise ». Ce livre est disponible à la Bibliothèque de l'UCL-Mons.</p> <p>[1] D. A. AAKER, C. MOORMAN (2021), Strategic Market Management, Eleventh Edition, John Wiley & Sons.</p> <p>[2] G.G. DESS, G.T.
