

The version you're consulting is not final. This course description may change. The final version will be published on 1st June.

2.00 credits	15.0 h	Q2
--------------	--------	----

Teacher(s)	Elens Laure ;
Language :	French > English-friendly
Place of the course	Bruxelles Woluwe
Prerequisites	<i>The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.</i>
Main themes	After having exposed the principles of drug chronic administration and covered all relative basic pharmacokinetic aspects, the effect of most common physiological (genetic, predisposition, environment,') and/or pathological (renal and hepatic failure) conditions on the different primary and secondary pharmacokinetic parameters and their potential consequences will be discussed. The influence of age (childhood and elderly) as well as over- and under-exposure on the pharmacokinetic behavior and the associated therapeutic response of several critical drugs will be developed.
Learning outcomes	<p><b>At the end of this learning unit, the student is able to :</b></p> <p>The aim of this course is to demonstrate the clinical relevance of fine-tuning and optimizing some particular critical posology's and treatments in order to improve the therapeutic response in each individual. As a future pharmacist and drug specialist, it appears as fundamental that students understand that a substantial number of pathological situations (age, renal/hepatic failure, drug interactions,') and/or physiological and metabolic conditions (genetics, environment,') can deeply affect the fate of a drug in the body.</p> <p>1</p>
