5.00 credits

20.0 h

Q2

Language :	English
Place of the course	Bruxelles Woluwe
Prerequisites	<p>The course aims to equip students with the skills to describe and analyze social network for health or social issues. The curriculum covers the fundamentals of social network research and incorporates hands-on experience in applying social network analysis to topics in health and society.</p> <p>The course is taught in English.</p> <p><i>The prerequisite(s) for this Teaching Unit (Unité d'enseignement – UE) for the programmes/courses that offer this Teaching Unit are specified at the end of this sheet.</i></p>
Main themes	<p><u>Topics</u></p> <p>Users and professionals from the health and social sectors initiate or maintain various formal and informal social relationships among themselves (social support, friendship, exchange, socialization, activity, etc.). These relationships result from structural and contextual properties (i.e. homophily, reciprocity, transitivity, etc.). In turn, they determine the emergence of groups and they influence the uneven distribution of resources within and between groups. Finally, they facilitate the diffusion of norms, behaviours and beliefs within and between groups.</p> <p>Social network research has been instrumental in explaining (health) behaviours inequalities, violence and conflict between and within groups, norms and practice dissemination, and trajectories (ie continuity of care in health care network). It may apply to individuals, small groups (such as families or classroom), organisations (company, hospital, school), or local communities.</p>
Learning outcomes	<p><b>At the end of this learning unit, the student is able to :</b></p> <ol style="list-style-type: none"> <li>1 Understand the essential relational challenges in (medical) sociology</li> <li>2 Analyze health or social issues using social network research</li> <li>3 Design and collect social network data</li> <li>4 Utilize software tools (R) for exploring and analyzing social graphs</li> <li>5 Engage in discussions on papers related to social network analysis</li> </ol>
Evaluation methods	<p>Assessment is based on an essay and on weekly assignments. The oral examination is devoted to the discussing your essay in relation with the course.</p>
Teaching methods	<ol style="list-style-type: none"> <li>1. Lecture</li> <li>2. Practice of the software and of data management.</li> <li>3. Every week, each student briefs the group on his/her essay.</li> <li>4. Weekly Assignments</li> </ol>
Content	<p>Social network research is not a method but a perspective exploring a topic through the relational lens. SNR addresses four different levels: ego, dyad, group and whole network.</p> <ol style="list-style-type: none"> <li>1. Introduction to Medical sociology and the relevance of social network analysis</li> <li>2. Key concepts in social network analysis : nodes, ties and context.</li> <li>3. Design of social network analysis and data management</li> <li>4. Visualization</li> <li>5. Ego-level: power and social capital</li> <li>6. Groups, communities and norms</li> <li>7. Topology and the small world : fragmentation and separation</li> <li>8. Dyadic contagion and peer-effects.</li> </ol>
