

General biology and an experimental approach to biology - General biology and an experimental approach to biology (General biology part)

The version you're consulting is not final. This course description may change. The final version will be published on 1st June.

6.00 credits

Q1

Language :	French
Place of the course	Bruxelles Woluwe
Prerequisites	Prerequisite: French language knowledge, qualities of observation, of intellectual curiosity, of reasoning, of synthesis.
Main themes	In a first part of the course, the cell is studied by closely associating morphology and function. The diversity and evolution of the living is first tackled by the study of meiosis, fertilization and Mendelian genetics. The study of animal evolution from the first animals to modern Man is based on arguments of anatomy and compared embryology illustrating the principle « ontogeny recapitulates phylogeny ».
Learning outcomes	
Evaluation methods	Assessment: Written exam.
Teaching methods	The course includes lectures, practical works and tutorials.
Content	Contents: (this course is given in French) Chapter 1: The chemistry of life Chapter 2: The cell Chapter 3: Cell physiology Chapter 4: Cell communication and signaling Chapter 5: Reproduction and genetics Chapter 6: Cell differentiation and embryology Chapter 7: Evolution Chapter 8: Experimental biology (for biomedical students only).
