

The version you're consulting is not final. This course description may change. The final version will be published on 1st June.

3.00 credits	20.0 h	Q1
--------------	--------	----

Teacher(s)	. SOMEBODY ;Collet Jean-François ;Decottignies Anabelle ;Hachez Charles ;Lucas Sophie (coordinator) ;Pierreux Christophe ;
Language :	French > English-friendly
Place of the course	Bruxelles Woluwe
Main themes	Several experimental models with their own distinct advantages are used in research. This course proposes an overview of the eight experimental models that are most often used in research. The course will provide information about how these model organisms contributed to major discoveries in the past and continue to be important tools in research.
Learning outcomes	At the end of this learning unit, the student is able to : 1 Provide an overview of several experimental models used in fundamental research: bacteria, yeasts, plant, C. elegans worm, D. rerio zebrafish, drosophila, mouse and Xenopus.
Faculty or entity in charge	SBIM
