Q1

Teacher(s)	Parienté William ;
Language :	English
Place of the course	Louvain-la-Neuve
Learning outcomes	
Evaluation methods	Evaluations consist of oral presentations, a written project, and class discussion. The use of artificial intelligence during the evaluations of this course is governed by the rules mentioned in the ESPO faculty note on this subject and available on the faculty intranet site in the information for students.
Teaching methods	Seminar-based discussions of frontier research. Readings to be discussed will be assigned ahead of time.
Content	Social Preferences and Economics Decision makers care about their own outcomes as well as the outcomes of other people. The question is how to incorporate these preferences into economic models. There is a risk that simply adding ad-hoc preferences for others' incomes will result in economic theories that "explain everything, and therefore, nothing" (Carpenter, 2010). This seminar will focus on advances in economics to measure and model social preferences, with applications to labour contracts, political participation, and public policy nudges based on social motivations.
Inline resources	Slides, homeworks, exercises, compulsory readings will be available on the course webpage on Moodle UCL (http://moodleucl.uclouvain.be/).
Faculty or entity in charge	ECON
