Introduction

The objective of this Master’s degree programme is to train computer science professionals capable of understanding and analysing the complex needs of a company, of designing computing systems that meet those needs, of mastering the rapidly evolving technological tools in this area, of implementing solutions, of assuring quality products and procedures in a company.

Your profil

This Master’s degree programme is particularly well-suited for students for who consider the Master’s degree programme (120) too burdensome.

You would like to

• Imagine, design, and implement computer science systems that will shape the future;
• continue your education beyond the Bachelor’s degree with a major in computer sciences (or the equivalent);
• improve your theoretical knowledge and develop your technical expertise in fields like artificial intelligence, computer networks, information security, software engineering and programming systems;
• improve your interdisciplinary knowledge in areas such as foreign languages, resource management, teamwork, autonomy and ethics.

Your futur job

We train

• professionals who will design computer systems that meet users’ needs;
• innovators who can master a wide range of constantly evolving technologies;
• specialists capable of implementing software solutions with particular attention paid to product quality and its development process.

Your programme

This Master’s degree programme consists of

• a core curriculum aiming to provide the knowledge and skills necessary to model and design complex applications. Topics covered include artificial intelligence, computer networking, software engineering, compilers and data bases;
• general knowledge courses such as classes in management and human resources (as a comprehensive university, UCL offers numerous general knowledge courses according to student interest);
• a graduation project that offers students the possibility to study a subject in-depth and thanks to its size, introduces students to the professional life of a computer scientist or researcher; the topic of this project is selected in consultation with the programme supervisors and possibly a company.
Learning outcomes

The computer science developers and designers of tomorrow face two major challenges:

• increasingly complex computer science systems
• increasingly varied areas of application

In order to meet these challenges, future diploma holders should:

• master real computer science technologies but also keep up with their constant progress
• work as part of multidisciplinary teams that take into account non-technical issues

The future diploma holder in computer science will acquire the knowledge and skills to become:

• scientists who know how to understand and analyse the complex requirements that a computer system must meet;
• professionals who will design computer systems that meet users’ needs;
• specialists capable of implementing software solutions with particular attention paid to product quality and its development process;

This Master’s degree programme (60) provides an in-depth understanding of concepts and emphasises abstract thinking. This theoretical approach is complemented by the application of these concepts. The programme thus includes numerous projects and studies.

Apart from certain exceptions outlined in the detailed course programme, all courses in the programme are given in English. The mastery of this language is indispensable in the area of computer science.

On successful completion of this programme, each student is able to:

1. demonstrate mastery of a solid body of knowledge in computer science allowing them to solve problems raised in their field of study

2. organise and carry out the development of a computer system that meets the complex demands of a client

2.1. Analyse a problem to solve or functional needs to be met and formulate a corresponding specifications note.
2.2. Model a problem and design one or more technical solutions in line with the specifications note.
2.3. Evaluate and classify solutions in light of all the criteria included in the specifications note: efficiency, feasibility, quality, ergonomics and environmental security.
2.4. Implement and test the chosen solution.
2.5. Come up with recommendations to improve the operational nature of the solution.

3. contribute as part of a team to the planning and completion of a project while taking into account its objectives, allocated resources, and constraints

3.1. Frame and explain the project’s objectives (in terms of performance indicators) while taking into account its issues and constraints
3.2. Collaborate on a work schedule, deadlines and roles
3.3. Work in a multidisciplinary environment with peers holding different points of view; manage any resulting disagreement or conflicts
3.4. Make team decisions and assume the consequences of these decisions (whether they are about technical solutions or the division of labour to complete a project)

4. communicate effectively (orally or in writing) with the goal of carrying out assigned projects in the workplace (in English in particular)

4.1. Identify the needs of the client or the user: question, listen and understand all aspects of their request and not just the technical aspects
4.2. Present your arguments and adapt to the language of your interlocutors: technicians, colleagues, clients, superiors
4.3. Communicate through graphics and diagrams: interpret a diagram, present project results, structure information
4.4. Read and analyse different technical documents (rules, plans, specification notes)
4.5. Draft documents that take into account contextual requirements and social conventions
4.6. Make a convincing oral presentation using modern communication techniques
5. Demonstrate rigor, openness and critical thinking as well as a sense of ethics in your work
5.1. Rigorously apply the standards of your discipline (terminology, measurement units, quality standards and security)
5.2. Find solutions that go beyond strictly technical issues by considering sustainable development and the socio-economic ethics of a project
5.3. Demonstrate critical awareness of a technical solution in order to verify its robustness and minimize the risks that may occur during implementation
5.4. Evaluate oneself and independently develop necessary skills to remain knowledgeable in the field

Programme structure

The Master’s degree programme (60) in computer science consists of a minimum of 60 credits spread over one year (under certain conditions). It consists of a core curriculum (50 credits) and 2 elective courses (10 credits).

This programme may vary depending on students’ prior course of study. If during their previous studies, students have already taken a required class or completed an equivalent activity, they may substitute this course with an activity of their choice from the Master’s degree programme (120) in computer science (provided they follow the programme guidelines). They will also verify that the minimum number of required credits for their diploma has been obtained.

Such programmes will be submitted to the appropriate programme commission for approval.

The majority of courses in this programme are offered in English. For non-Francophone students, alternative courses will be suggested by the programme commission as substitutes for required courses taught in French. This will be done on a case by case basis depending on the student’s curriculum.

It is always possible for students to speak in French in class or during evaluations. Specifically, the graduation thesis/project may be written and defended in either English or French.
SINF2M1 Detailed programme

Programme by subject

CORE COURSES

- **Mandatory Courses**
  - Courses not taught during 2019-2020
  - Periodic courses not taught during 2019-2020

- **Optional Courses**
  - Periodic courses taught during 2019-2020
  - Activity with requisites

Click on the course title to see detailed informations (objectives, methods, evaluation...)

**Specialised courses in computer science**

- LINGI2132 Languages and translators
  - Pierre Schaus
  - 30h+30h
  - 6 Credits
  - 2q

- LINGI2241 Architecture and performance of computer systems
  - Ramin Sadre
  - 30h+30h
  - 6 Credits
  - 1q

- LINGI2255 Software engineering project
  - Kim Mens
  - 30h+30h
  - 6 Credits
  - 1q

- LINGI2261 Artificial intelligence: representation and reasoning
  - Yves Deville
  - 30h+30h
  - 6 Credits
  - 1q

**Interdisciplinary courses in the humanities and social sciences**

- LFSA2210 Organisation and human resources
  - John Cultiaux
  - 30h
  - 3 Credits
  - 2q

**Courses in information systems**

- LINGI2172 Databases
  - Siegfried Nijssen
  - 30h+30h
  - 6 Credits
  - 2q

**Elective courses (10 credits)**

En plus des 2 UE ci-dessous, l'étudiant peut prendre des cours au choix dans le porte-feuille de l'UCL avec accord de la commission de programme et pour 10 crédits au moins.

- LINGI2401 Open Source strategy for software development
  - Lionel Dricot
  - 30h+15h
  - 5 Credits
  - 1q

- LINGI2402 Open Source Project
  - 5 Credits
  - 1 + 2q

**Societies, Cultures, Religions (2 credits)**

The students select one course between:

The student shall select

- LTECO2100 Sociétés, cultures, religions : Biblical readings
  - Hans Ausloos
  - 15h
  - 2 Credits
  - 1q

- LTECO2300 Sociétés, cultures, religions : Ethical questions
  - Marcela Lobo Bustamante
  - 15h
  - 2 Credits
  - 1q

- LTECO2200 Sociétés-cultures-religions : Human Questions
  - Régis Burnet
  - 15h
  - 2 Credits
  - 1 ou 2q

**Master Thesis (15 credits)**

- LSINF2991 Graduation project/End of studies project
  - 15 Credits
The programme's courses and learning outcomes

For each UCLouvain training programme, a reference framework of learning outcomes specifies the competences expected of every graduate on completion of the programme. You can see the contribution of each teaching unit to the programme's reference framework of learning outcomes in the document "In which teaching units are the competences and learning outcomes in the programme's reference framework developed and mastered by the student?"
Admission

General (https://uclouvain.be/en/study/inscriptions/admission-requirements-master-s-degree.html) and specific admission requirements for this program must be satisfied at the time of enrolling at the university.

In the event of the divergence between the different linguistic versions of the present conditions, the French version shall prevail.

SUMMARY

- Specific Admission Requirements
- University Bachelors
- Non university Bachelors
- Holders of a 2nd cycle University degree
- Holders of a non-University 2nd cycle degree
- Adults taking up their university training
- Access on the file
- Admission and Enrolment Procedures for general registration

Specific Admission Requirements

This programme is taught in English with no prerequisite in French. The student is supposed to have at least a B2 level in the European Framework of Reference. A certificate is required for the holders of a non-Belgian degree, see selection criteria of the personalized access.

Masters

Holders of a non-University 2nd cycle degree

Adults taking up their university training

> See the website [Valorisation des acquis de l'expérience](https://uclouvain.be/fr/etudier/vae)

It is possible to gain admission to all masters courses via the validation of professional experience procedure.

Access on the file

Reminder : all Masters (apart from Advanced Masters) are also accessible on file.

Admission and Enrolment Procedures for general registration
Supplementary classes

To enrol for this Masters, the student must have a good command of certain subjects. If this is not the case, they must add preparatory modules to their Master’s programme.

Courses for students coming from a short bachelor. These students will have to take at least 105 credits to obtain the master in computer science.

Teaching method

Active learning and non-technical skills
You will play an active role in your training. The pedagogical approach is a well-balanced mix of lectures, exercises, and projects to be carried out alone or in a group. The teaching methods vary. Sometimes, you will discover concepts and techniques independently. At these times, the teaching team acts as a resource in the learning process. At other times, the pedagogy focuses on transmitting the knowledge necessary to complete future tasks.

Special emphasis is placed on non-technical skills (autonomy, organisation, time management, different modes of communication, etc.) In particular, by emphasising project-based activities (including a large scale project that puts students in a semi-professional situation), this programme develops students’ critical thinking skills, which allows them to design, model, implement, and validate complex computing systems.

Languages
The lingua franca of computer science is English. The use of English in the programme allows students to develop their mastery of this language, which facilitates their integration into professional life. All course material and course supervision are in English. However, students may always ask or respond to exam questions in French if desired.

Moreover, the programme allows students to attend language courses at the university’s Language Institute (ILV).

Evaluation

The evaluation methods comply with the regulations concerning studies and exams (https://uclouvain.be/fr/decouvrir/rgiee.html). More detailed explanation of the modalities specific to each learning unit are available on their description sheets under the heading “Learning outcomes evaluation method”.

The learning activities are assessed according to the rules of the University (see exam regulations (https://uclouvain.be/en-enseignement-reglements.html)), that is through written and oral exams, personal or group assignments, public presentation of projects and defence of the graduation thesis. For the courses given in English, questions will be expressed in English by the teacher, but the student may choose to answer in French. For the courses given in French, the questions will be expressed in French by the teacher, but the student may ask for help in translation and choose to answer in English.

Some activities such as projects during the semester under the supervision of the teaching staff and in collaboration with other students are not reorganized outside the period prescribed for the course. They are not re-evaluated at a later session.

Evaluation methods specific to each course are communicated to students by teachers at the beginning of the semester.

Mobility and/or Internationalisation outlook

International Openness (for UCL students)
This Master’s degree programme (60) does not allow for Erasmus/Socrates/Mercator exchange programmes. Students interested in international exchanges are urged to enrol in the 120 credit Master’s degree programme in computer science.

International attraction (for foreign students)
The entire Master’s degree programme is offered in English and knowledge of French is not necessary. Except for rare exceptions, courses are given in English. For non-Francophone students, alternative courses will be suggested by the programme commission as substitutes for required courses taught in French. This will be done on a case by case basis depending on the student’s curriculum.

Possible trainings at the end of the programme

The 120 credit Master’s degree programmes-accessible
The 60 credit Master’s degree programme in computer science may be followed by the 120 credit Master’s degree programme in computer science
