Introduction

The objective of this Master’s degree programme is to train computer science professionals capable of understanding and analysing the complex needs of a company, of designing computing systems that meet those needs, of mastering the rapidly evolving technological tools in this area, of implementing solutions, of assuring quality products and procedures in a company.

Your profile

You would like to

• Imagine, design, and implement computer science systems that will shape the future;
• continue your education beyond the Bachelor’s degree with a major in computer sciences (or the equivalent);
• improve your theoretical knowledge and develop your technical expertise in fields like artificial intelligence, computer networks, information security, software engineering and programming systems;
• improve your interdisciplinary knowledge in areas such as foreign languages, resource management, teamwork, autonomy and ethics.

Your future job

We train

• professionals who will design computer systems that meet users’ needs;
• innovators who can master a wide range of constantly evolving technologies;
• specialists capable of implementing software solutions with particular attention paid to product quality and its development process.

Your programme

This Master’s degree programme consists of

• a core curriculum aiming to provide the knowledge and skills necessary to model and design complex applications. Topics covered include artificial intelligence, computer networking, software engineering, compilers and data bases;
• general knowledge courses such as classes in management and human resources (as a comprehensive university, UCLouvain offers numerous general knowledge courses according to student interest);
• a graduation project that offers students the possibility to study a subject in-depth and thanks to its size, introduces students to the professional life of a computer scientist or researcher; the topic of this project is selected in consultation with the programme supervisors and possibly a company.
Learning outcomes

The computer science developers and designers of tomorrow face two major challenges:

- increasingly complex computer science systems
- increasingly varied areas of application

In order to meet these challenges, future diploma holders should:

- master real computer science technologies but also keep up with their constant progress
- work as part of multidisciplinary teams that take into account non-technical issues

This master 60 aims at the in-depth understanding of concepts and the acquisition of thinking and abstraction skills. This theoretical approach is supplemented by the application of concepts which takes an important place in the training. The program therefore includes many projects and works.

Except for exceptions specified in the detailed program, all the courses of the program are given in English, the command of this language being essential in the field of data processing. This offers French-speaking students the opportunity to practice English intensively during their training.

On successful completion of this programme, each student is able to:

1. Demonstrate mastery of a solid body of knowledge in computer science allowing them to solve problems raised in their field of study

   This Master’s degree programme aims to provide students with advanced knowledge and is based on the fundamentals of computer science acquired in the Bachelor’s degree programme. A diversity of subjects are offered in the common curriculum:

   - Networking;
   - Programming languages;
   - Software engineering;
   - Artificial intelligence.

2. Organise and carry out the development of a computer system that meets the complex demands of a client

   2.1. Analyse a problem to solve or functional needs to be met and formulate a corresponding specifications note.
   2.2. Model a problem and design one or more technical solutions in line with the specifications note.
   2.3. Evaluate and classify solutions in light of all the criteria included in the specifications note: efficiency, feasibility, quality, ergonomics and environmental security.
   2.4. Implement and test the chosen solution.
   2.5. Come up with recommendations to improve the operational nature of the solution.

3. Contribute as part of a team to the planning and completion of a project while taking into account its objectives, allocated resources, and constraints

   3.1. Frame and explain the project’s objectives (in terms of performance indicators) while taking into account its issues and constraints
   3.2. Collaborate on a work schedule, deadlines and roles
   3.3. Work in a multidisciplinary environment with peers holding different points of view; manage any resulting disagreement or conflicts
   3.4. Make team decisions and assume the consequences of these decisions (whether they are about technical solutions or the division of labour to complete a project)

4. Communicate effectively (orally or in writing) with the goal of carrying out assigned projects in the workplace (in English in particular)

   4.1. Identify the needs of the client or the user: question, listen and understand all aspects of their request and not just the technical aspects
   4.2. Present your arguments and adapt to the language of your interlocutors: technicians, colleagues, clients, superiors
   4.3. Communicate through graphics and diagrams: interpret a diagram, present project results, structure information
   4.4. Read and analyse different technical documents (rules, plans, specification notes)
   4.5. Draft documents that take into account contextual requirements and social conventions
   4.6. Make a convincing oral presentation using modern communication techniques

5. Demonstrate rigor, openness and critical thinking as well as a sense of ethics in your work

   5.1. Rigorously apply the standards of your discipline (terminology, measurement units, quality standards and security)
   5.2. Find solutions that go beyond strictly technical issues by considering sustainable development and the socio-economic ethics of a project
   5.3. Demonstrate critical awareness of a technical solution in order to verify its robustness and minimize the risks that may occur during implementation
   5.4. Evaluate oneself and independently develop necessary skills to remain knowledgeable in the field
Programme structure

The student’s master’s program in computer science will total a minimum of 60 credits distributed over an annual block comprising a common core (21 credits), a final thesis (15 credits) and units of elective course (24 credits).

This programme may vary depending on students’ prior course of study. If during their previous studies, students have already taken a required class or completed an equivalent activity, they may substitute this course with an activity of their choice from the Master’s degree programme (120) in computer science (provided they follow the programme guidelines). They will also verify that the minimum number of required credits for their diploma has been obtained.

Such programmes will be submitted to the appropriate programme commission for approval.

The majority of courses in this programme are offered in English. For non-Francophone students, alternative courses will be suggested by the programme commission as substitutes for required courses taught in French. This will be done on a case by case basis depending on the student’s curriculum.

It is always possible for students to speak in French in class or during evaluations. Specifically, the graduation thesis/project may be written and defended in either English or French.

For students coming from bachelor’s degrees in management information technology or computer science and systems from the Hautes Ecoles in FWB, the program also includes an additional module comprising 45 credits which must be taken as a priority during the first registration in the master’s degree. Including this complementary module, the student’s complete program should reach 105 credits spread over 2 annual blocks.

SINF2M1 Programme

Detailed programme by subject

CORE COURSES

Mandatory
Optional
△ Not offered in 2023-2024
☉ Not offered in 2023-2024 but offered the following year
■ Offered in 2023-2024 but not the following year
△ △ Not offered in 2023-2024 or the following year
☉ Activity with requisites
△ Open to incoming exchange students
☉ Not open to incoming exchange students
☉ Teaching language (FR, EN, ES, NL, DE, ...)

Click on the course title to see detailed informations (objectives, methods, evaluation...)

Specialised courses in computer science

The student chooses 3 courses from:

- LIN02132 Languages and translators by Ramin Sadre [q2] [30h+30h] [6 Credits] ☋
- LIN02241 Architecture and performance of computer systems by Tom Barbette [q1] [30h+30h] [6 Credits] ☋
- LIN02255 Software engineering project by Axel Legay [q1] [30h+30h] [6 Credits] ☋
- LIN02262 Machine Learning :classification and evaluation by Pierre Dupont [q2] [30h+30h] [6 Credits] ☋
- LIN02172 Databases by Siegfried Nijssen [q2] [30h+30h] [6 Credits] ☋

Elective courses (24 credits)

The student completes his program with optional disciplinary courses in the master’s 120 program in computer science with the agreement of the program committee. Students’ attention is drawn to the following two courses:
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Instructor</th>
<th>Credits</th>
<th>Language</th>
</tr>
</thead>
<tbody>
<tr>
<td>LINFO2401</td>
<td>Open Source strategy for software development</td>

</tbody>
</table>
Supplementary classes

To access this Master, students must have a good command of certain subjects. If this is not the case, students must take supplementary classes chosen by the faculty to satisfy course prerequisites.

- **Mandatory**
- **Optional**
- △ Not offered in 2023-2024
- ○ Not offered in 2023-2024 but offered the following year
- ◼ Offered in 2023-2024 but not the following year
- △ ◼ Not offered in 2023-2024 or the following year
- □ Activity with requisites
- ◼ Open to incoming exchange students
- △ ◼ Not open to incoming exchange students
- ◼ Teaching language (FR, EN, ES, NL, DE, ...)

Courses for students coming from a short bachelor. These students will have to take at least 105 credits to obtain the master in computer science.

The programme's courses and learning outcomes

For each UCLouvain training programme, a reference framework of learning outcomes specifies the skills expected of every graduate on completion of the programme. Course unit descriptions specify targeted learning outcomes, as well as the unit's contribution to reference framework of learning outcomes.
Access Requirements

Master course admission requirements are defined by the French Community of Belgium Decree of 7 November 2013 defining the higher education landscape and the academic organisation of courses.

General and specific admission requirements for this programme must be satisfied at the time of enrolling at the university.

Unless explicitly mentioned, the bachelor's, master's and licentiate degrees listed in this table or on this page are to be understood as those issued by an institution of the French, Flemish or German-speaking Community, or by the Royal Military Academy.

In the event of the divergence between the different linguistic versions of the present conditions, the French version shall prevail.

SUMMARY

- General access requirements
- Specific access requirements
- University Bachelors
- Non university Bachelors
- Holders of a 2nd cycle University degree
- Holders of a non-University 2nd cycle degree
- Access based on validation of professional experience
- Access based on application
- Admission and Enrolment Procedures for general registration

Specific access requirements

This programme is taught in English with no prerequisite in French. See selection criteria of the personalized access.

Masters

Holders of a non-University 2nd cycle degree

Access based on validation of professional experience

> It is possible, under certain conditions, to use one’s personal and professional experience to enter a university course without having the required qualifications. However, validation of prior experience does not automatically apply to all courses. Find out more about Validation of priori experience.

Access based on application

Access based on application : access may be granted either directly or on the condition of completing additional courses of a maximum of 60 ECTS credits, or refused.

The first step of the admission procedure requires to submit an application online : [https://uclouvain.be/en/study/inscriptions/futurs-etudiants.html](https://uclouvain.be/en/study/inscriptions/futurs-etudiants.html).

Selection criteria are summarized here (contact : epi-admission@uclouvain.be).

Admission and Enrolment Procedures for general registration
Teaching method

Active learning and non-technical skills

You will play an active role in your training. The pedagogical approach is a well-balanced mix of lectures, exercises, and projects to be carried out alone or in a group. The teaching methods vary. Sometimes, you will discover concepts and techniques independently. At these times, the teaching team acts as a resource in the learning process. At other times, the pedagogy focuses on transmitting the knowledge necessary to complete future tasks.

Special emphasis is placed on non-technical skills (autonomy, organisation, time management, different modes of communication, etc.) In particular, by emphasising project-based activities (including a large scale project that puts students in a semi-professional situation), this programme develops students’ critical thinking skills, which allows them to design, model, implement, and validate complex computing systems.

Languages

The lingua franca of computer science is English. The use of English in the programme allows students to develop their mastery of this language, which facilitates their integration into professional life. All course material and course supervision are in English. However, students may always ask or respond to exam questions in French if desired.

Moreover, the programme allows students to attend language courses at the university’s Language Institute (ILV).

Evaluation

The evaluation methods comply with the regulations concerning studies and exams. More detailed explanation of the modalities specific to each learning unit are available on their description sheets under the heading “Learning outcomes evaluation method”.

The learning activities are assessed according to the rules of the University (see exam regulations), that is through written and oral exams, personal or group assignments, public presentation of projects and defence of the graduation thesis. For the courses given in English, questions will be expressed in English by the teacher, but the student may choose to answer in French. For the courses given in French, the questions will be expressed in French by the teacher, but the student may ask for help in translation and choose to answer in English.

Some activities such as projects during the semester under the supervision of the teaching staff and in collaboration with other students are not reorganized outside the period prescribed for the course. They are not re-evaluated at a later session.

Evaluation methods specific to each course are communicated to students by teachers at the beginning of the semester.

Mobility and/or Internationalisation outlook

International Openness (for UCLouvain students)

This Master’s degree programme (60) does not allow for Erasmus/Socrates/Mercator exchange programmes. Students interested in international exchanges are urged to enrol in the 120 credit Master’s degree programme in computer science.

International attraction (for foreign students)

The entire Master’s degree programme is offered in English and knowledge of French is not necessary. Except for rare exceptions, courses are given in English. For non-Francophone students, alternative courses will be suggested by the programme commission as substitutes for required courses taught in French. This will be done on a case by case basis depending on the student’s curriculum.

Possible trainings at the end of the programme

The 120 credit Master’s degree programmes-accessible

The 60 credit Master’s degree programme in computer science may be followed by the 120 credit Master’s degree programme in computer science
