SINF2M - Introduction

Introduction

Introduction

This master's degree programme tries to strike a **balance between “soft skills” and scientific and technical knowledge, between excellence in research and the pragmatism of field work**. It offers:

- an approach to computer science based on fundamental **concepts** that keep up with the rapid pace of technological progress;
- a programme taught **entirely in English** to improve students' language skills, especially in technical English (both written and spoken);
- **exchange programmes** and dual degrees in Belgium, Europe and across the world.

Your profile

You would like to

- **imagine, design, and implement** computer science systems that will shape the future;
- continue your education beyond your undergraduate degree with a major in computer sciences (or the equivalent);
- improve your **theoretical knowledge** and develop your technical expertise in fields like artificial intelligence, computer networks, information security, software engineering and programming systems;
- improve your **interdisciplinary knowledge** in areas such as foreign languages, resource management, teamwork, autonomy and ethics.

Your future job

We train

- **scientists** who know how to investigate a sharp problematic using scientific literature in the field;
- **professionals** who will design computer systems that meet users' needs;
- **innovators** who can master a wide range of constantly evolving technologies;
- **specialists** capable of implementing software solutions with particular attention paid to product quality and its development process.

Your programme

This master's degree programme consists of

- **required coursework** that seeks to give students the necessary skills to model and design complex applications (which is an indispensable part of the education of all university-trained computer scientists);
- **a major** selected by students that allows them to gain cutting-edge knowledge in a field of their interest: software engineering and programming systems, artificial intelligence and big data, networks and security;
- **elective courses** that allow students to explore their interests whether it be computer science or another discipline (management, business creation, languages). As a comprehensive university, UCLouvain has numerous courses of study;
- a **graduation project** that makes up half of the programme during the last year. It offers students the possibility to study a subject in-depth and thanks to its size, introduces students to the professional life of a computer scientist or researcher; the topic of this project is selected in consultation with the programme supervisors and possibly a company.

SINF2M - Teaching profile

Learning outcomes

The computer science developers and designers of tomorrow face two major challenges:

- increasingly complex computer science systems
- increasingly varied areas of application

In order to meet these challenges, future diploma holders should:

- master real computer science technologies but also keep up with their constant progress
- innovate by integrating in computer systems elements linked to artificial intelligence, software engineering, and security networks
- work in multi-disciplinary teams that incorporate non-technical issues, and be open to the social sciences and humanities to help them in this task.

This programme is based on research:

UCLouvain is a research university. The computer science research conducted at the institute ICTEAM is internationally recognised. Through the major courses offered in this master's degree programme, students will be able to take advantage of cutting-edge knowledge. In addition to providing fundamental knowledge, this programme is based on the in-depth understanding of concepts and the ability to think abstractly. These tools allow students to quickly adapt to the needs of companies. Moreover, this research may be continued through projects carried out at the doctoral level.

Applying concepts:

The application of concepts is a key part of this master's degree programme. It is inconceivable that students can master theoretical concepts but not know how to apply them to a concrete problem. The programme includes a number of projects and studies, a large-scale graduation project and the possibility of completing an internship in a company.

International openness:

English is de facto the most used language in companies and those in the technical field. This master's degree programme is thus taught in English, which gives our students good speaking and writing skills. By offering a master's degree in English, this programme demonstrates its international openness. The use of English allows the programme to welcome international students while at the same time immersing them in a French-speaking environment. It also increases the possibility of exchanges and dual diplomas with other (non-Belgian) universities.

On successful completion of this programme, each student is able to :

1. demonstrate mastery of a solid body of knowledge in computer science allowing them to solve problems raised in their field of study

This master's degree programme aims to provide students with **advanced knowledge**. A diversity of subjects are offered in the common curriculum and students **specialise via a major**:

- M.1. Security networks;
- M.2. Programming systems;
- M.3. Software engineering;
- M.4. Artificial intelligence;
- M.5. Data Science and Applied Mathematics;
- M.6. Business issues.

2. organise and carry out the development of a computer system that meets the complex demands of a client

- 2.1. **Analyse** a problem to solve or the functional needs to be met and formulate a corresponding **specifications note**.
- 2.2. **Model** a problem and **design** one or more technical solutions in line with the specifications note.
- 2.3. **Evaluate and classify** the solutions in light of all the criteria included in the specifications note: efficiency, feasibility, quality, ergonomics, environmental security and sustainability.
- 2.4. **Implement and test** the chosen solution.
- 2.5. Come up with **recommendations** to improve the solution.

3. organise and carry out a study to understand a new problem in the field

- 3.1. **Document** and summarise the existing **body of knowledge** in the area under consideration.
- 3.2. Propose a **model** and/or an **experimental device** in order to simulate or test a **hypotheses** relating to the phenomenon being studied.
- 3.3. Write a cumulative **report** that explains the potential of the theoretical or technical **innovations** resulting from the research project.
- 3.4. Think disruptively and creatively, open to plurality.

4. contribute as part of a team to the planning and completion of a project while taking into account its objectives, allocated resources, and constraints

- 4.1. Frame and explain the **project's objectives** (in terms of performance indicators) while taking into account its issues and constraints.

4.2. **Collaborate** on a work schedule, deadlines and roles.

4.3. Work in a **multi/inter/transdisciplinary environment** with peers holding **different points of view**; manage any resulting disagreement or conflicts, identify the contributions and limits of each discipline, dialogue on the same project.

4.4. **Make team decisions** when choices need to be made (whether they are about technical solutions or the division of labour to complete a project).

5. communicate effectively (orally or in writing) with the goal of carrying out assigned projects in the workplace (in English in particular)

5.1. Identify the needs of all parties: **question, listen and understand** all aspects of their request and **not just the technical aspects**.

5.2. **Present your arguments**, advise and adapt to the **language of your interlocutors**: technicians, colleagues, clients, superiors, specialists from other disciplines or general public.

5.3. Communicate **through graphics and diagrams**: interpret a diagram, present project results, structure information.

5.4. Read and **analyse different technical documents** (rules, plans, specification notes).

5.5. **Draft documents** that take into account **contextual requirements** and social conventions.

5.6. Make a **convincing oral presentation** using modern communication techniques.

6. Rigorously mobilise their scientific and technical skills and their critical sense to analyse complex situations by adopting a systemic and transdisciplinary approach, and to adapt their technical responses to the current and future challenges of the socio-economic-ecological transition, thus actively contributing to the transformation of society

6.1. Acquire a knowledge base on the socio-ecological issues and use multi-criteria tools to evaluate the sustainability of a technology, in quantitative and/or qualitative terms.

6.2. Define, specify and analyse a problem in all its complexity, taking into account its various dimensions (social, ethical, environmental, etc.), scales (time, place) and uncertainty.

6.3 Identify, propose and activate engineering levers that can contribute to sustainable development and transition (eco-design, robustness, circularity, energy efficiency, etc.).

6.4 Demonstrate critical awareness of a technical solution in order to verify its robustness and minimise the risks that may occur during implementation, be aware of its limitations, and take a personal stand on ethical, environmental and societal issues.

6.5. Evaluate oneself and independently develop necessary skills to remain knowledgeable in the field.

Programme structure

The program includes four parts:

- a core curriculum (28 credits), including a final thesis (25 credits).
- a specialisation track, compulsory training (30 credits).
- one or more options allowing students to specialise in a field of IT (20-40 credits).
- elective courses (20-40 credits).

The graduation project is typically carried out in the last year. However, students may, depending on their training, conduct other courses in either the first or second year so long as they have completed the prerequisite courses. This is especially the case for students who have completed a portion of their studies abroad. The annual timetable of courses given in the detailed programme description is for guidance only.

Additionally, students wishing and presenting a coherent project have the opportunity to broaden their training to non-technical skills through elective courses.

SINF2M Programme

Detailed programme by subject

CORE COURSES [28.0]

- Mandatory
- ⊗ Optional
- △ Not offered in 2026-2027
- ⊙ Not offered in 2026-2027 but offered the following year
- ⊕ Offered in 2026-2027 but not the following year
- △ ⊕ Not offered in 2026-2027 or the following year
- Activity with requisites
- ⊕ Open to incoming exchange students
- ⊗ Not open to incoming exchange students
- [FR] Teaching language (FR, EN, ES, NL, DE, ...)

OPTIONS

Student complete their program by selecting 62 credits from the following sections.

- In the "Computer Science Options" section, students must validate at least one of the 6 options. They can also validate several.
- In the "Options and elective courses in socio-economic knowledge" section, students validate one of the two options or must choose a minimum of 6 credits from the courses in the option in business issues (maximum one class of innovation may be chosen, maximum one course among those offered by the CPs may be taken into account in these 6 credits).
- Students complete their programme by choosing from the computer science option courses and the list of elective courses.

OPTIONS EN SCIENCES INFORMATIQUES

MAJOR IN ARTIFICIAL INTELLIGENCE: BIG DATA, OPTIMIZATION AND ALGORITHMS

Students completing the major in Artificial Intelligence: big data, optimization and algorithms will be able to:

- Identify and implement methods and techniques that allow software to solve complex problems that when solved by humans require "intelligence",
- Understand and put to good use methods and techniques relating to artificial intelligence such as automatic reasoning, research and heuristics, acquisition and representation of knowledge, automatic learning, problems associated with overcoming constraints,
- Identify applications and its methods and tools; understand a particular category of applications and its related techniques, for example robotics, computer vision, planning, data mining, computational linguistics and bioinformatics, big data processing,
- Formalise and structure a body of complex knowledge and use a systematic and rigorous approach to develop quality "intelligence" systems.

- Mandatory
- ⊗ Optional
- △ Not offered in 2026-2027
- ⊙ Not offered in 2026-2027 but offered the following year
- ⊕ Offered in 2026-2027 but not the following year

MAJOR IN SOFTWARE ENGINEERING AND PROGRAMMING SYSTEMS**Students completing the major “Software engineering and programming systems” will be able to:**

- Understand and explain problems that come up during large scale software projects as well as the long-term critical impact that their choice of solutions may have (construction dimensions as well as validation, documentation, communication and management of a project involving large teams as well as costs and deadlines),
- Select and apply methods and tools of software engineering to develop complex software systems and meet strict quality standards: reliability, adaptability, scalability, performance, security, usefulness,
- Model the products and processes necessary to obtain such systems and analyse these models,
- Develop and implement analytical programmes focused on conversion and optimisation as well as computer representations,
- Put to good use different programming paradigms and languages, in particular those that deal with functional, object-oriented and competing programmes,
- Understand the issues associated with different and competing programming models and use the appropriate model,
- Define a new language (syntax and semantics) suitable to a specific context.

- Mandatory
- ⊗ Optional
- △ Not offered in 2026-2027
- ⊙ Not offered in 2026-2027 but offered the following year

OPTION IN DATA SCIENCE AND APPLIED MATHEMATICS**Students completing the major "Data science and Applied Mathematics" must be able to:**

- Understand engineering fields requiring synergy between applied mathematics and computer science such as algorithms, scientific calculations, modelling computer systems, optimisation, machine learning or data mining;
- Understand and put to good use algorithms and techniques used in data science;
- Identify and implement models and techniques relating to statistics, machine learning and data mining;
- Learn classes of applications such as the treatment of noisy data, pattern recognition or automatic extraction in large data collections.

OPTION IN CYBERSECURITY

Students who have completed the "Cybersecurity and Information Technology" track should be able to:

- Understand areas of engineering that require synergy between computer security, networks, and systems, such as cryptography, data protection, application security, security architecture, or programming,
- Comprehend and appropriately apply methods and techniques related to cybersecurity, including prevention, detection, and response to cyber threats,
- Identify and implement security practices and standards to protect the infrastructure, systems, and data of organizations,
- Apply their knowledge to real-life scenarios through projects.

- Mandatory
- ⊗ Optional
- △ Not offered in 2026-2027
- ⊖ Not offered in 2026-2027 but offered the following year

OPTION NETWORKS AND SYSTEMS

Students who have completed the "Networks and Systems" track should be able to:

- Understand and explain different devices and protocols used in computer and cellular networks;
- Design, configure and manage computer networks while taking into account application needs;
- Understand the operation of IoT and cellular networks;
- Explain the problems that affect cellular and IoT networks and develop solutions to cope with them;
- Understand how to optimise applications to efficiently use parallel cores;
- Understand, implement and use lock-free data structures;
- Understand the interactions between real-time operating systems and hardware;
- Design and implement applications running on embedded systems

- Mandatory
- ⊗ Optional
- △ Not offered in 2026-2027

OPTION IN MEDICAL COMPUTING

Students completing the major in "Health informatics" will be able to:

- Identify and use methods and techniques that provide software-based solutions to complex problems encountered in hospitals, in bio-pharmaceutical environments, in life sciences, or in digital health.
- Take part in multidisciplinary projects bringing together medical, biological and engineering expertise to the benefit of patient health.
- Understand and put to good use the methods and techniques pertaining to medical informatics and bioinformatics, such as artificial intelligence, health interoperability, clinical knowledge structuring, applied statistics, information security, software quality, as well as the effective management and processing of large volumes of data.
- Understand specific categories of applications where these methods and techniques can be applied, such as diagnostic support, therapeutic assistance, hospital information systems, medical and biomedical imaging, smart devices, clinical trials, health data mining, as well as automated processing of the medical language.
- Formalise and structure a body of complex knowledge by using a systematic and rigorous approach to the development of high-quality medical and biomedical information systems.

MAJOR IN INTERDISCIPLINARY PROGRAM IN ENTREPRENEURSHIP - INEO

The aim of this option, which is common to most EPL masters' programmes, is to familiarise students with the specifics of entrepreneurship and business creation, equipping them with the skills, knowledge, and tools necessary for starting a business. The interdisciplinary entrepreneurship training (INEO) is an option that spans two years and is integrated into over 30 Master's programmes across 9 faculties/schools at UCLouvain.

Choosing the INEO option requires completing an interfaculty dissertation (in teams) focused on a business creation project. Access to this option, as well as to each of its courses, is limited to students selected based on their application.

Full details are available at <https://uclouvain.be/fr/etudier/ineo>.

Students who choose this option must select a minimum of 20 credits and a maximum of 25 credits. This option is not available in English and cannot be taken simultaneously with the "Business Risks and Opportunity" option.

ELECTIVE COURSE IN SOCIO-ECONOMIC KNOWLEDGE

Within the section "Options and elective courses in socio-economic knowledge", students must either validate one of the two options or are required to select at least 6 ECTS credits from the courses offered within the "Major in Business risks and opportunities" (a maximum of one Innovation Class may be selected, and a maximum of one course offered by the CPs may be counted towards these 6 credits).

OTHERS ELECTIVE COURSES

Students may also enrol in any course that is part of other EPL master's programmes, subject to the approval of the selection panel.

Course prerequisites

There are no prerequisites between course units (CUs) for this programme, i.e. the programme activity (course unit, CU) whose learning outcomes are to be certified and the corresponding credits awarded by the jury before registration in another CU.

The programme's courses and learning outcomes

For each UCLouvain training programme, a [reference framework of learning outcomes](#) specifies the the skills expected of every graduate on completion of the programme. Course unit descriptions specify targeted learning outcomes, as well as the unit's contribution to reference framework of learning outcomes.

SINF2M - Information

Access Requirements

Master course admission requirements are defined by the French Community of Belgium Decree of 7 November 2013 defining the higher education landscape and the academic organisation of courses.

General and specific admission requirements for this programme must be satisfied at the time of enrolling at the university.

Unless explicitly mentioned, the bachelor's, master's and licentiate degrees listed in this table or on this page are to be understood as those issued by an institution of the French, Flemish or German-speaking Community, or by the Royal Military Academy.

In the event of the divergence between the different linguistic versions of the present conditions, the French version shall prevail.

Holders of a non-University 2nd cycle degree

Access based on validation of professional experience

It is possible, under certain conditions, to use one's personal and professional experience to enter a university course without having the required qualifications. However, validation of prior experience does not automatically apply to all courses. Find out more about [Validation of priori experience](#).

Access based on application

Access based on application : access may be granted either directly or on the condition of completing additional courses of a maximum of 60 ECTS credits, or refused.

The first step of the admission procedure requires to submit an application online : <https://uclouvain.be/en/study/inscriptions/futurs-etudiants.html>.

[Selection criteria](#) are summarized here (contact : epl-admission@uclouvain.be). In cases where direct access to the master program is not available or not as described above, an application for admission based on application file may still be submitted to the Enrolment Office.

For any question, please contact epl-admission@uclouvain.be

Admission and Enrolment Procedures for general registration

Teaching method

Active learning and non-technical skills

You will play an active role in your education. The pedagogical approach is a balanced mix of lectures, exercises, and projects to be completed individually or in groups. The teaching methods are varied. At times, you will be required to explore concepts and techniques independently, with the teaching team acting as a resource to support your learning. At other times, the pedagogy is more directive, providing you with the necessary tools to complete future tasks.

A significant emphasis is placed on non-technical skills (autonomy, organisation, time management, different modes of communication, etc.) In particular, by emphasising project-based activities (including a large-scale project that puts students in a semi-professional situation), this programme develops students' critical thinking skills, which allows them to design, model, implement, and validate complex IT systems.

Languages

The lingua franca of computer science is English. The use of English in the programme will help students enhance their mastery of this language, which will facilitate their professional integration. Course materials and guidance are in English. However, students may always ask or respond to exam questions in French if desired.

Additionally, the programme allows students to take language courses at the university's Language Institute (ILV) and to take part in exchange programmes.

Interdisciplinary approach

Over the course of their careers, computer scientists are expected to manage projects as well as teams and show interest in the complex socio-economic environment in which computer science belongs. It is therefore suggested that students learn about disciplines through elective courses or certain major courses such as the interfaculty major "small and medium sized business creation".

Evaluation

The evaluation methods comply with the [Academic regulations and procedures](#). More detailed explanation of the modalities specific to each learning unit are available on their description sheets under the heading "Learning outcomes evaluation method".

The learning activities are assessed according to the rules of the university (see [exam regulations](#)), namely written and oral exams, personal or group assignments, public presentation of projects and defence of the graduation thesis. For the courses taught in English, questions will be formulated in English by the teacher, but the student may choose to answer in French. For the courses taught in French, the questions will be formulated in French by the teacher, but the student may request help with translation into English and answer in English.

Some activities such as projects during the semester under the supervision of the teaching staff and in collaboration with other students are not reorganised outside the period prescribed for the course. They cannot be reassessed in a subsequent session.

The detailed assessment procedures for each teaching unit are communicated to students by the teaching staff at the beginning of each semester.

To find out more about the assessment procedures, students are invited to consult the activity description sheet.

To obtain the average, the marks obtained for the teaching units are weighted by their respective credits.

Mobility and/or Internationalisation outlook

The EPL has developed over a hundred partnerships in 36 countries (both within and outside EU) to offer exchange programmes to its students. EPL also provides opportunities to obtain double degrees, joint degrees or dual master's degrees in several fields. Currently, EPL participates in two Erasmus Mundus programmes: [FAME](#) and [STRAINS](#).

In addition to exchange programmes under the Erasmus+ programme, numerous agreements have been established with a broad range of universities through various partner networks such as:

- [TIME](#) (Top Industrial Managers en Europe).
- [CLUSTER](#)
- [Magalhães](#)
- [Circle U](#)

There are therefore ample opportunities to gain an additional qualification and/or spend part of the year abroad during your two-year master's degree! It's the perfect opportunity to discover or improve your knowledge of a foreign language, tackle subjects from a new angle and gain unique experience in Europe or the rest of the world.

For more information (destinations, testimonials, application procedures), please visit the webpages of the [Cellule internationale de l'EPL](#).

Possible trainings at the end of the programme

Accessible supplementary Master's degree programme: not applicable.

Accessible Doctoral Programmes.

The Master's degree in Computer Science may be followed by a doctoral programme in engineering sciences.

Most of the UCLouvain master's degree programmes (generally 60 credits) are open to UCLouvain master's degree diploma holders.

Different master's degree programmes (60) in management (automatic admission based on written application): see this list.

The master's degree (60) in Information and Communication at Louvain-la-Neuve or the master's degree (60) in Information and Communication at Mons.
